What you need to Play

THE OFFICIAL PLAYMAT FOR REBIRTH

A HANDFUL OF 8-SIDED DICE (D8)

You need to **print the Print&Play components** found in the app under BRWR: Print&Play.
You will also need the following components from the **Black Rose Wars Rebirth Core Box**:

MINIATURES

COLORED CUBES

BASES FOR MAGES AND EVOCATIONS

PHYSICAL ACTION TOKENS, TROPHY TOKENS, PERSISTENCE TOKENS, TRAP/ PROTECTION TOKENS, POWER TOKENS, AND THE CROWN TOKEN

POWER BOARD

You will then need to print out the Mage Sheets, Follower Sheets, Measuring Tools and Trophy Board attached to this rulebook.

Basic Concepts

Models and Bases

Models may be Opposing or Allied with one another.

ALLIED MODELS

Models under the control of the same player are considered Allied Models.

OPPOSING MODELS

Models under the control of two different players are considered Opposing Models.

Blocking Elements (BE)

Walls and some other elements drawn on the Playmat (shown in white in the Game Area diagram to the side) are Blocking Elements (BE). These elements hinder Line of Sight (see below), but not Model Movement. Nevertheless, a Model cannot stop on a blocking element.

Line of Sight (LoS)

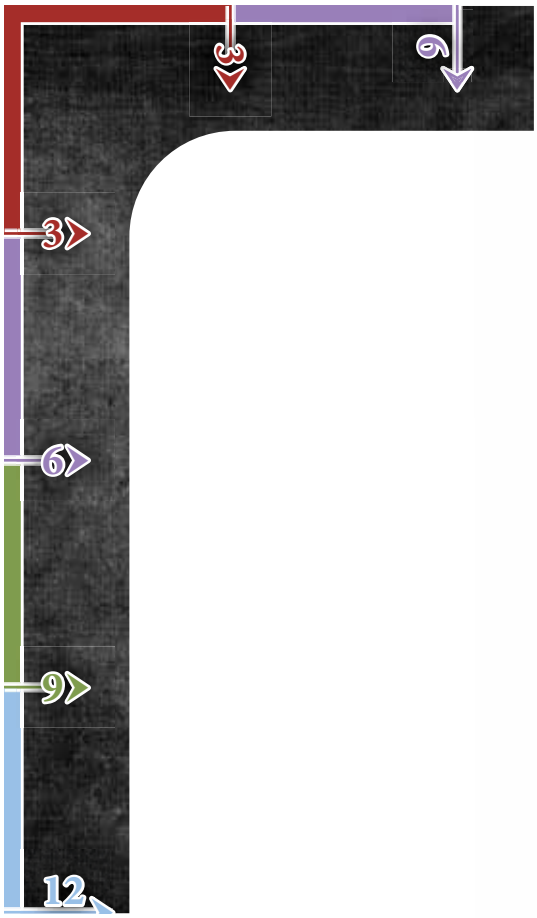

A Model is considered to have a Line of Sight (LoS) on all Models on the Playmat.
The LoS is considered Clean if by drawing a straight line between the two affected Models it does not pass over any BE.
The LoS is considered Obstructed if by drawing a straight line between the two affected Models it passes over at least one BE; an Obstructed LoS forces a Reduction (see Distance Measuring on the next page) to all distances measured between the two affected Models. For example, in the image on the right, if Gramigna wants to target Baron Doria with a Spell with Range 6›, but there is an EB between the two Models, the range of the Spell becomes 3›.

Distance Measuring

In *Rebirth Skirmish*, distances are measured in centimeters using a tape measure or one of the Measuring Tools provided with this document (which must be printed and cut out).
The distances on the game components are also indicated with colored arrows called Categories, also shown on the Measuring Tool:

3cm: 3›
6cm: 6›
9cm: 9›
12cm: 12›

Some Game Effects or Rules may apply an Increase or Reduction in one or more Categories to a distance indicated on the game component.
An Increase always equals to 3cm more than what is stated on the game component, this means that a category 3› becomes 6›, a category 6› becomes 9›, a category 9› becomes 12›; a category 12› cannot be increased in any way.
A Decrease always equals to 3cm less than what is stated on the game component, this means that a category 12› becomes 9›, a category 9› becomes 6›, a category 6› becomes 3›; a category 3› cannot be decreased in any way.
It is possible to measure distances at any time.
To measure distances between two Models, consider the closest points on their bases.
If a rule applies 'within' a certain distance, it applies to any distance that is not greater than the specified distance. For example, within 3cm means any distance that does not exceed 3cm.

Engagement Area

As long as a Model is within 3› of an Opposing Model on which it has Clean LoS, both are in each other's Engagement Area and are considered Engaged. An Engaged Model is subject to some limitations (see **Engaged Models**).
For convenience, you can check whether two Models are Engaged by using the black Mage Base included in the core game box, which has a diameter of 3›.

Dice

The game uses 8-sided dice (d8) to perform rolls.

REROLLING THE DICE

Some rules allow dice to be rerolled. Regardless of how many Effects or rules allow a die to be rerolled, a single die can never be rerolled more than once. The reroll must be made before any modifiers are applied.

Success Threshold (ST)

When performing an attack roll each die used in the roll must equal or exceed a value called Success Threshold or ST. This value is 5, so a die obtains a Success if it shows a result of 5 or higher (5+). The Success Threshold can be changed in various ways during the game.

Cubes and Pool

Each player has at their disposal a number of colored Cubes that form their Pool. These Cubes will be used in various ways during the game, mainly to represent Instability (the power of Spells) and the Damage inflicted on Opposing Models. Unless otherwise specified in a game rule and Effect, when a player's Cube is to be removed from a spot in the game (a Pool, a Playmat spot, etc...) it returns to the owner's Pool.

Creation of the Coven

Each player forms their Coven by choosing a Mage and some Followers using the following rules.

The Mages

Each Coven must include a Mage chosen from those available to the players.

MAGE FEATURES

- **A** **Name**: The Mage's Name
- **B** **Type**: Keywords owned by the Model that can trigger effects if mentioned in the rules of a Skill or Spell.
- **C** **Actions**: The number of Actions the Model can perform during its activation.
- **D** **Speed**: The maximum number of cm the Model can move with a Movement action.
- **E** **Physical Attack**: The number of d8 the Model rolls to perform a physical attack against an Enemy Model within the engagement distance.
- **F** **Health**: The number of damage cubes the Model can gain before being Defeated.
- **G** **Spells**: Each Mage has 3 Spells available, these are Actions that the Mage can perform to obtain a variety of effects, but they must be prepared during the Study Phase
- **H** **Passive Skills**: Effects whose rules always apply as long as the Mage is in the Lodge.

The Followers

Each Coven must include one to three Followers. The player has 6 ● (Follower Slots) at their disposal, which they must spend to select their Followers from the list found at the end of this document. Each Follower requires the expense of a certain number of ● (indicated under their Cost) to be included in the Coven, this expense can range from ● to ●●●●●●. Regardless of the Followers chosen by player, a Coven must consist of a minimum of one Mage and one Follower, up to a maximum of one Mage and three Followers.

FOLLOWER FEATURES

- **A Name**: The Follower's Name.
- **B Cost**: The number of ● that the player must spend to include the Follower in their Coven.
- **C Type**: Keywords owned by the Model that can trigger effects if mentioned in the rules of a Skill or Spell.
- **D Actions**: The number of Actions that the Model can perform during its activation.
- **E Speed**: The maximum number of cm the Model can move with a Movement Action.
- **F Physical Attack**: The number of d8 the Model rolls to perform a Physical Attack against an Enemy Model within the engagement distance.
- **G Health**: The number of damage cubes the Model can gain before being Defeated.
- **H Skills**: These effects can be applied by following the rules described in the Follower Sheet.

Setting up a game

Follow these steps to set up a game of *Rebirth Skirmish*:

1. Lay the Playmat (A) on a table large enough to fit it completely.
2. Each player places their Mage (B) and Follower (C) Sheets and Miniatures.
3. Each player chooses one of the player colors available in the core box of *Black Rose Wars: Rebirth* (blue, red, purple, or white), then:
4. They take 15 cubes of the chosen color (D) and form a Pool of cubes next to their Mage Sheet.

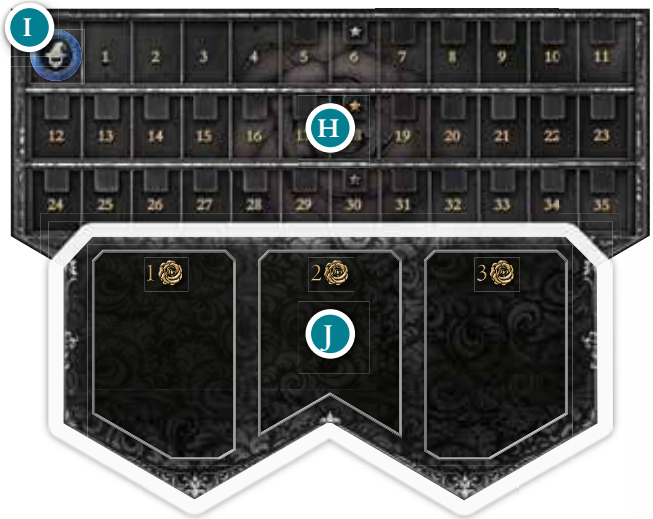

5. They then take all the bases of their chosen color and clip them to their Miniatures, making sure to use the Mage one for the Mage Miniature and the Evocation ones for their Followers.

6. They take the Persistence Tokens and stack them on their Mage Sheet so that the token showing the number III is the bottom one in the stack and the one showing the number I (E) is the top one.

7. They take the Trophy Tokens (F) and the Power Token of their chosen color and place them in front of them.
8. Take the Black Cubes (G) and create a Pool for the Black Rose on one side of the table.
9. Mutually choose one of the available Adventures and follow the directions for setting it up as described in its rules.
10. Each player rolls 3d8 and adds up the results. The player with the highest result chooses one of the Deployment Zones indicated in the chosen Adventure and deploys their Coven according to the rules specified in that Adventure. The player with the second highest result does the same, proceeding in this way until all players have deployed their Coven. The last player to deploy the Coven takes the Crown Token.
11. Set up the Power Board (H) by placing each player's and the Black Rose's Power Token (I) on the 0 slot of the Power Points track.
12. Place the Trophy Board (J) on the Power Board as shown in the figure

13. Place one Trophy Token of each player in the 3 slot of the Trophy Board. Place two Trophy Tokens of each player in the 2 slot of the Trophy Board.
14. Place four Trophy Tokens of each player in the 1 slot of the Trophy Board.

The game can begin.

Game Flow

A game of *Rebirth Skirmish* is divided into Rounds. Each Round is divided into 4 Phases:

- Study Phase
- Action Phase
- Black Rose Phase
- Cleanup Phase

Each Adventure indicates the maximum number of Rounds for its duration. When a Round ends a new one begins unless the maximum number of Rounds indicated in the Adventure have been played. Once the last Round is played the game ends and Power Point calculations are made to determine the winner.

CROWN TOKEN

This token indicates who is the first player for the Round.

Study Phase

In this phase, players decide how much Instability (the power with which they fuel their powers) to invest in their Spells.
Each player takes up to 3 cubes from their Pool; these cubes represent Instability. The player places the Instability as they prefer on their Mage Sheet by assigning it to the Spells indicated on it; any number of an Instability can be assigned to the same Spell (even none).

A Spell that has Instability assigned to it can be cast during the Action Phase of the current Round.
When all players have decided how to assign Instability, the Study Phase ends and you move on to the Action Phase.

Action Phase

Starting with the player with the Crown and proceeding clockwise, each player performs a Turn.
In a Turn, a player must activate their Mage and may choose to activate one of their Followers who does not have a Persistence Token on their Card; they may activate these two Models in any order they choose. When their Turn begins, the player takes the topmost Persistence Token in the stack on their Mage Sheet and places it on the Card of the Follower they chose to Activate; if they do not activate any Follower they simply set them aside.
When the player has resolved the activations of their Models, the Turn passes to the player to their left; this continues until each player has removed all Persistence Tokens from their Mage sheet.

ACTIONS

Actions allow Models to influence the game in different ways.
When a Model is Activated, it can perform a number of Actions equal to the Actions feature indicated on its Sheet. The player who controls it chooses which Actions the Model performs, and may choose the same Action several times during a single Activation.
The actions are:

MOVEMENT

The Model can move a maximum number of cm equal to its Speed feature.
During this Movement the Model can be moved freely without regard to the BEs (shown in white in the Playmat diagram attached to this document).
The Model can end its Movement with its base partially on a BE, as long as the center of its base is not on a BE; the Model is considered Hindered as long as it is in that position (see Physical Attack).
If the Model's Movement ends with the center of its base above a BE, you must follow these rules:

- The Model must be moved the minimum distance possible that brings the center of its base not above the BE on which it sits.
- After the move, the Model should have its base partially on the BE.

If during its Movement Action a Model does not stand with the center of its base on a BE and is in an Opposing Model's Engagement Area, it becomes Engaged and the Movement Action ends immediately (the remaining cm of speed are lost).
An Engaged Model may perform this Action and leave its Opponents' Engagement Area; when the controlling player declares the Movement Action, any Opponent who has the active Model in their Engagement Area and who is not in turn Engaged by Opponents other than the active Model performs a Physical Attack on it.

PHYSICAL ATTACK

A Model may perform a Physical Attack by targeting an opponent with whom it is Engaged.
During its Activation, a Model may perform this Action a single time.
When it does, roll a number of d8 equal to its Physical Attack feature; for each Success it inflicts one Damage on the targeted Model. The player controlling the Model that performed the Physical Attack takes a number of cubes equal to the Damage inflicted from their Pool and assigns them to the target Model by placing them on its Sheet; these cubes represent the Damage.

Before rolling for a Physical Attack, the Success Threshold can be modified by applying the following modifiers:

- The attacking Model is Engaged with Opponents other than the target of its Physical Attack: ST+1.
- The target of the Physical Attack is Engaged with Opponents other than the attacking Model: ST-1.
- The Target is Hindered: ST-1.
- Skills and Spells: Skills and Spells can modify the ST for a Physical Attack.

If the conditions for applying more than one modifier to the ST are met, all modifiers must be applied before the roll is made.

CAST A SPELL (MAGE ONLY)

During one of their activations, a Mage may cast one of the Spells described on their Sheet that has at least one Instability assigned to it. To do so, the controlling player must indicate the Spell they want to cast and remove a number of Instabilities assigned to it equal to the Spell's Casting Cost (CC). The player places the newly removed cubes in their Pool. At this point, the player resolves the Spell's Effect as described in its text.

ADVENTURE ACTIONS

Some Adventure Sheets indicate Special Actions that can be used by Models while participating in that Adventure. The Effects of Special Actions are described in the Adventure Sheet.

Cleanup Phase

In this Phase all players must perform these steps:
Apply what is indicated in the Adventure under the Cleanup Phase item.
Remove all Instability on the Mage Sheets.
Remove all Protection Tokens assigned to the Models, but not the Trap Tokens.
The player with the fewest Power Points takes the Crown Token. If there is a tie between several players, they each roll 1d8 by rerolling equal results until there is a different result for each player; the player who obtains the highest number gets the Crown Token.
If the last Round of the Adventure has not been played, the new Round begins.

End of Game

When all the Rounds included in the Adventure have been played a final Power Point score is calculated. Each Adventure has instructions on how to gain .
Use the Power Board and Power Tokens to keep track of the gained by each player.
When all the tallies have been made, the player with the most PP is declared the winner of the Game!

SPELLS

Spells are Effects that only Mages can resolve, usually using the Spell Casting Action. Each Spell falls into one of 4 Types (Attack, Contingency, Protection, Trap) described below.

SPELL ANATOMY:

Casting Cost (CC) A: The number of Instabilities that must be removed from the Spell, through the Cast a Spell action, in order to apply its Effect.

Spell Type B: ⚡ Attack, Contingency, Protection, Trap.

Target C: Indicates which type of Model can be designated as the target of the Spell Effect, usually a Mage, a Follower, or any type of Model. Some Spells indicate Personal as the target, which indicates that they affect only the Model of the Mage using them. Some Spells indicate Special as the target, and what they affect is indicated directly in the text of their Effect.

Personal, Opposing Mage, Opposing Model, Opposing Follower, Allied Model*, Allied Follower*, Special ★.

Range D: The distance at which the target of the Spell can be.

Effect: the Effect of the Spell.

B ⚡ **Shared Torture**

A 1 C D 9

Perform a Magic Attack with 3d8. You can reroll any number of Dice from this Magic Attack; for each die rerolled that obtains a Success, the target inflicts 1 on you.

ATTACK SPELLS

⚡ **Feverish Dreams**

1 9

Perform a Magic Attack with 2d8 against the target. If the target suffers at least 1 because of this Effect, assign it a Token.

An Attack Spell allows you to inflict Damage on opponents, usually by performing a Magic Attack. The target of an Attack Spell must be a Model not belonging to your own Coven.

To apply the Effect of one of these Spells there must be LoS between the Model performing the Cast a Spell action and the target of the Spell, and the target must be within the Distance indicated in the Spell. When measuring the Distance of an Attack Spell it suffers a Reduction for each BE that the Mage performing the Cast a Spell action and its target are located.

To resolve a Magic Attack, the player rolls the number of d8 indicated in the Spell Effect. For each Success they inflict one Damage on the target Model.

Before rolling for a Magic Attack, the Success Threshold can be modified by applying the following modifiers:

The target is Hindered: ST-1.

Skills and Spells: Skills and Spells can change the ST for a Magic Attack.

The player who controls the Model that performed the Attack Spell takes a number of cubes equal to the Damage inflicted from their Pool and assigns them to the target Model by placing them on its Sheet; these cubes represent the Damage.

CONTINGENCY SPELLS

Black Feather

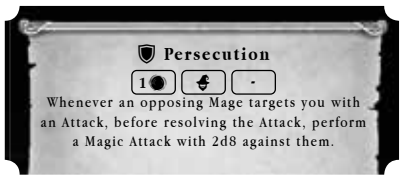

1 6

Choose a location within 6 of the target and where the target can be placed. Place the target in the chosen location. Assign a Token to all Engaged with the target after placement.

A Contingency Spell generates an Effect of various kinds that alters some aspect of the game, such as, for example, providing numerical bonuses to the rolls or features of a Model. When the Effect of one of these Spells is applied, if it shows the ✧ symbol assign a Quick Persistence Token by placing it next to the target, and move it along with it if the target is moved. The part of the Effect preceded by the ✧ symbol is active as long as the Quick Persistence Token is located next to the target.

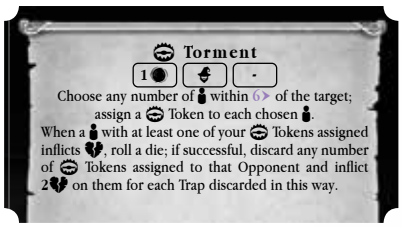

Each player has a single Quick Persistence Token at their disposal; if they cast a new Contingency Spell, the player can move their Persistence Token to the target of the newly cast Spell by removing it from the Model which it is currently assigned to.

PROTECTION SPELLS

These Spells provide defensive effects to their target.
When the Effect of one of these Spells is applied, assign a Protection Token by placing it next to the target, and move it along with it if the target is moved. The Effect is active as long as the Protection Token is next to the target. A Model with an assigned Protection Token cannot be chosen as a target for Protection Spells.
Each player has four Trap/Protection Tokens at their disposal; if they cast a new Protection Spell, the player can move their Trap/Protection Tokens to the target of the newly cast Spell by removing them from the Models to which they are currently assigned.

TRAP SPELLS

These Spells inflict negative effects on their target.
When the Effect of one of these Spells is applied, assign a number of Trap Tokens by placing them next to the target, and moving them along with it if the target is moved.
When the condition indicated in the Effect of the Trap Spell occurs, the target discards one or more of the Trap Tokens assigned to it and suffers the Effect indicated on the Spell; this will generally apply during the Activation of the target Model by temporarily interrupting the performance of one of its Actions.
Each player has four Trap/Protection Tokens at their disposal; if they cast a new Trap Spell, the player can move their Trap/Protection Tokens to the target of the newly cast Spell by removing them from the Models to which they are currently assigned.

Defeat of a Model

When a Model is assigned a number of Damage equal to its Health feature, it is Defeated. When this happens, apply as outlined in the next paragraphs according to the type of Model that was Defeated.

DAMAGE INFLICTED BY THE BLACK ROSE

Some Effects of Adventures inflict Black Rose Damage on Models. These Damages are indicated on the Model Sheets using Black Cubes.

DEFEATED MAGE

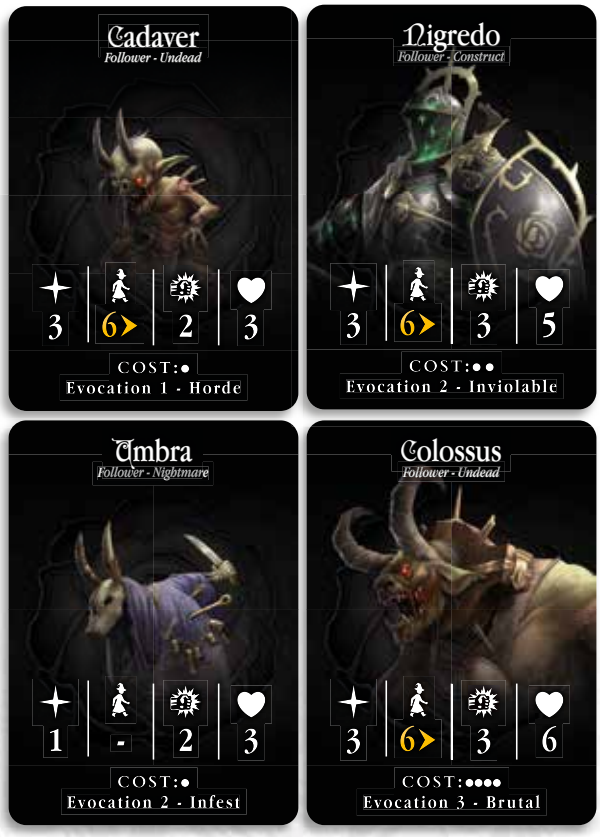

To resolve the following consider the Black Rose as if she were a Mage who participates in the Mage's Defeat due to the Damage she inflicts on them. If the Black Rose gains Power, advance her Power Token on the Power Board. If the Black Rose gains Trophies, place them in her Pool.
When a Mage is Defeated the controlling player applies the following:

The player who controls the Model that inflicted the Damage that Defeated the Mage takes one of their Tokens from the leftmost column of the Trophy Board that contains at least one of them, gaining the Power Points indicated on that column. All players who have inflicted at least one Damage on the Defeated Mage take one of their Trophy Tokens from the rightmost column of the Trophy Board, each gaining 1 Power Point. If a player has to take a Mage's Trophy Token but there are no more on the Trophy Board, they do not take any Trophy or Power Point.
They remove Damage, Trap Tokens and Defense Tokens from the Mage Sheet and returns them to their owners (Black Rose Damage returns to a Pool on one side of the table).
They place the Model in a location entirely within their Deployment Area.

DEFEATED FOLLOWER

When a Follower is Defeated the controlling player applies the following:
They remove Damage, Trap Tokens, and Defense Tokens from the Follower Sheet and return them to their owners.
They remove the Model of the Follower from the Playmat.

Followers' Skills

Evocation N: During the Study Phase, if this Follower is Defeated, their player may remove from play a number of cubes equal to N from their Pool. If they do, they place this Follower's Model within 6» of their Mage.

Horde: When this Model attacks, it gains Physical Attack +1 if its target is in the Engagement Area of another Model of your Coven.

Masochism: When this Model attacks, it gains Physical Attack +1 for each Damage cube it has.

Inviolable: This Model can never gain Status Tokens.

Brutal: When this Model performs a Physical Attack, all Opposing Models within its Engagement Area suffer the attack (roll the dice separately for each Model in the Engagement Area).

Infest: This Model follows these rules:

- It is not deployed on the Playmat during game setup, but is kept in the Pool of the player who included it in their Coven.
- When Summoned during the Study Phase (because defeated previously), this Model is placed in the player's Pool.
- When this Model is placed on the Playmat, the player controlling it places a Cube from their Pool next to it to indicate that they own it; when the Model moves, the Cube moves along with it.
- When the Mage of this Model's Coven performs a Movement Action, they may choose not to move; if they do, they attach one of the Models of their Coven with this Skill that is in their Pool to an Opposing Model on which they have LoS, and place one of their cubes next to it to indicate that it is their property.

When this Model is attached it follows these rules:

- It is considered Engaged exclusively by the Model with which it is Attacked and is never considered Engaged by other Models.
- It does not perform Physical Attacks on Engaged Opponents who perform a Movement Action.
- It is considered Allied by all Models that are not part of the Coven of the Model to which it is Attached.
- When the Model to which it is Attached moves, it moves with it; the location of the Model at the end of the movement is decided by the owner of the Model to which it is Attached.
- The Speed of the Model to which it is attached is reduced by one Category.
- It can perform Physical Attack Actions exclusively by targeting the Model to which it is attached.
- If the Model it is attached to is defeated, this Model returns to the owner's Pool; all tokens assigned to it return to the owners, while any Damage suffered by the Model remains on its Sheet.
- This Model can stop on BEs; if its base is completely inside one of them, no LoS can be drawn on this Model.

Recall: when the Mage of this Model's Coven performs a Movement Action, they may choose not to move; if they do, they choose any number of Models in their Coven with this Skill and place them within 3» of themselves.

Adventures

Adventures indicate additional rules for the game, and objectives useful for players to gain points in specific ways.
In the Adventures, Physical Action Tokens are used to represent specific points on the Playmat or items that need to be retrieved or conquered by the Covens. Each Adventure indicates what the Physical Action Tokens represent during the game.
A Physical Action Token takes up no slots, and is not a BE unless otherwise specified in the text of the Adventure. Distance measurements from the Physical Action Token should be made by considering its outer edge as if it were a base.

Relics of the Coven

Some Lodge Rooms have been temporarily reactivated by teleporting within them powerful Relics that the Covens had found among the Ruins. The Mages must retrieve the Relics of their Covens while their opponents stand in their way, and while the dormant power of the reactivated Rooms continues to try to bring the Relics back inside them.

Duration: 4 Rounds.
Physical Action Token: Relic.

RELIC

The Relic is a power object that the Coven lost among the ruins of the Lodge.
The Relic follows these rules.

- When a Mage who is within 3➤ of their Coven's Relic ends their Activation, if they are not Engaged, they can collect it. If they do, the controlling player places the Relic on their Mage Sheet.
- A Mage who has collected the Relic suffers a Reduction to their Speed.
- A Mage who has collected the Relic is Hindered.
- When a Mage who has collected the Relic is Defeated, the controlling player must place the Relic from the Mage Sheet at the location on the Playmat indicated on the Adventure Map.

CLEANUP PHASE

Apply the following Effects in order:

- Each player whose Mage has collected the Relic gains 2.
- Each player whose Mage has collected the Relic, and whose Mage is in their Deployment Zone gains an additional 2.
- The Inflicts 1 Damage on each Mage who has collected the Relic.
- The gains 2 For each Relic not collected by a Mage.

END OF THE GAME

The player who owns the most Trophy Tokens gains 2.

Black Rose Petal

A Black Rose petal, a concentration of arcane power that every Mage greedily covets, has appeared at the center of the Lodge ruins. The Covens are ready to compete to gain the petal's power!

Duration: 4 Rounds.
Physical Action Token: Petal.

PETAL

The Petal unleashes waves of power that Mages must absorb at the risk of their own lives.
The Petal follows these rules.

- When a Mage performs a Magic Attack while within 6➤ of the Petal, they cannot use the Movement Action for the remainder of their Activation.
- When a Mage who is within 3➤ of the Petal performs a Magic Attack, they cast an additional 2d8 and the ST has -2 for that Magic Attack.
- When a Mage that is within 6➤ of the Petal performs a Magic Attack, they cast an additional 1d8 and the ST has -1 for that Magic Attack.

CLEANUP PHASE

Apply the following Effects in order:

- Each player whose Mage is within 6➤ of the Petal gains 1, then the inflicts 1 Damage on that Mage.
- Each player whose Mage is within 3➤ of the Petal gains 3, then the Inflicts 3 Damage on that Mage.
- If the inflicted no Damage in this Phase, she gains 5.

END OF THE GAME

The player who owns the most Trophy Tokens gains 2.
