BLACK ROSE
WARS
DUEL
KAMI

The Lodge of the Sun

Hidden among the sacred mists of a sanctuary in the hills of Edo, the Lodge of the Sun preserves the ancient mystical art of Shugendō. Its monks, led by the legendary En no Gyōja, weave together prayers and spells, summoning the power of the Kami, the protective spirits of the people of the East. For centuries, they have watched over the fragile balance between the world of the living and that of the spirits, holding back the dark forces that threaten their land.

But now a shadow is cast over the Lodge. Abe no Seimei, the most brilliant of the disciples, harbors a forbidden ambition—to lead the mages into a new era, where arcane power is no longer used to protect, but to dominate. His plots, woven in the shadows to undermine his master, have awakened a forgotten horror—a Mononoke, a vengeful spirit thirsty for magic and blood.

Now, the Lodge of the Sun must choose—appease the wrath of the Specter, or perish under the weight of its own destiny.

How to read this rulebook

This rulebook is divided into eight chapters, which are to be consulted as indicated below to understand the game in the simplest and most straightforward way possible.

1. **Components:** All the game components included in the box are displayed visually in this chapter.
2. **Basic Concepts:** This chapter introduces the game without going into detail about the rules, instead it provides a basis for a better understanding of the following chapters.
3. **Setup:** This chapter contains all the instructions for setting up the playing area.
4. **Game Turn:** This chapter explains in detail the rules to follow during the five phases that make up a Game Turn. It clarifies the flow of actions that each player must perform, but without going into rules that are not strictly related to a single Game Phase. Instead, these are all mentioned with cross-references and indications pointing to the chapter that covers each one.
5. **End of game Tally:** This chapter lists the rules for declaring the winner at the end of the game.
6. **Rules Compendium:** This chapter explains in detail all the in-depth rules of the game or that require the temporary interruption of the game flow in order to be applied.
7. **Duel Avatar:** This chapter explains how to insert the Avatar into a game, a third player guided by the Black Rose and controlled by an A.I.
8. **Beyond the Duel:** This chapter provides practical information on how to use the contents of this box with the other products in the Black Rose Wars line.

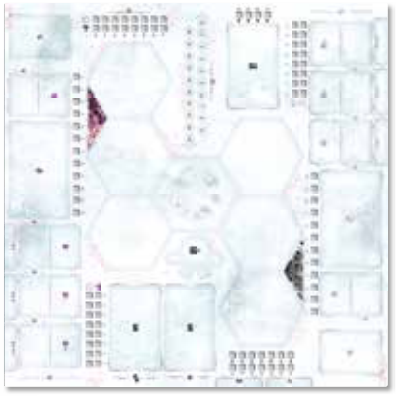
Components



1 GAME BOARD

7 ROOMS

36 SHUGENDŌ SPELL CARDS

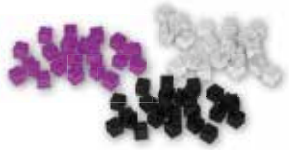
6 PERSONAL SPELL CARDS

4 FORGOTTEN SPELL CARDS

1 SCHOOL REFERENCE CARD

AVATAR COMPONENTS

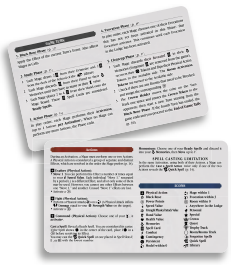
17 EVOCATION CARDS



75 DAMAGE/ INSTABILITY CUBES

7 ROOM ACTIVATION TOKENS

2 MAGE CARDS



2 REFERENCE CARDS

1 EVENTS CARD

2 QUEST CARDS

4 PHYSICAL ACTION TOKENS

1 CROWN TOKEN

12 PERSISTENCE TOKENS

6 POWER TOKENS

4 PORTALS

En no Gyōja

En no Gyōja, the legendary founder of the Lodge of the Sun, is a warrior mage who defies the laws of time with his unshakable mastery.

He honors the Kami through ancient rites that call upon the spirits' power, channeling ancestral forces in every gesture.

His occult arts intertwine with martial discipline, transforming mystical tools into magical weapons of unparalleled effectiveness.

Although now elderly, his strict ascetic practices give him the strength and agility of a young man, allowing him to lead the Lodge of the Sun with wisdom and vigor, inspiring respect and fear in anyone who dares to challenge him.

Abe no Seimei

Abe no Seimei, a brilliant onmyōji and disciple of En no Gyōja, embodies the perfect balance between cunning and arcane power.

His magic, based on tactics and manipulation, feeds on his oratorical skills and his immense knowledge, which enable him to turn any situation to his advantage.

A high-ranking member of the Lodge of the Sun, he aspires to overthrow his master and take his place at the head of the Lodge. With his mind set on infiltrating the Japanese courts, he intends to use the powers of the Lodge and its mages to conquer the nation, turning each move into a step towards absolute power.

Mononoke

Mononoke, a vengeful spirit awakened in the Lodge, embodies the dark wrath of an ancient curse.

With the appearance of a giant samurai, his torso has transformed into an enormous maw, ready to swallow up all magical energy.

It assaults the mages with unstoppable fury, feeding on their magic and transforming each spell into a lethal weapon of destruction and death.

Mononoke is the living manifestation of vengeance, a wandering nightmare that turns light into darkness and energy into despair, bringing doom to every corner of the Lodge.

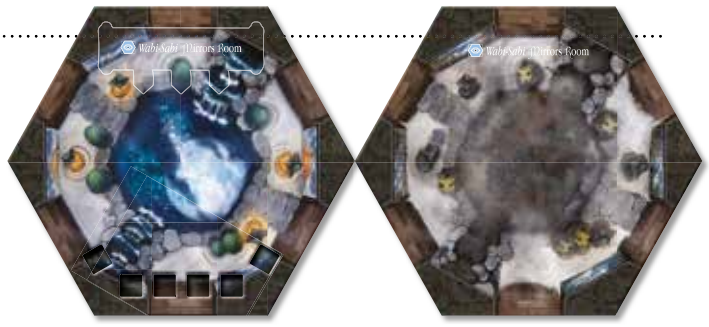
Basic Concepts

Black Rose Wars Duel: Kami is a game of duels between Mages taking place in the Lodge of the Sun, a sentient place where a powerful supernatural entity, the Black Rose, dwells.
This is the place where the Mages of the land of Edo gather to learn the arcane arts and challenge each other to improve their skills and make contact with the benevolent spirits called Kami.

This game allows two players to challenge each other in a fearsome magical battle, teaching the fundamentals of its sister game: *Black Rose Wars*.
This is a stand-alone game, but most of the material in this box can be used to expand *Black Rose Wars* as well. The reverse, however, is not always possible (see page 27).

The Lodge and the Rooms

The Lodge is the battlefield on which the Mages duel during the game. The Lodge is made up of **7 Rooms** placed on the game board during game setup. When referring to the **set of seven Rooms**, the game uses the term **Lodge**.
A Room is Intact if it shows the side with the slots (called Instability Slots, see page 19), or Wrecked if it shows the side without the slots. The specific rules for Rooms and their effects are detailed on page 20.



Intact Room *Wrecked Room*

- The Mage

The Mage represents the player during the game. Each Mage has their own Model that represents them in the Lodge, and a Mage Card that describes their characteristics.
Please note: Across all game components, players are identified with the term "Mage".

MAGE CARD ANATOMY

Available Physical Action Token *Exhausted Physical Action Token*

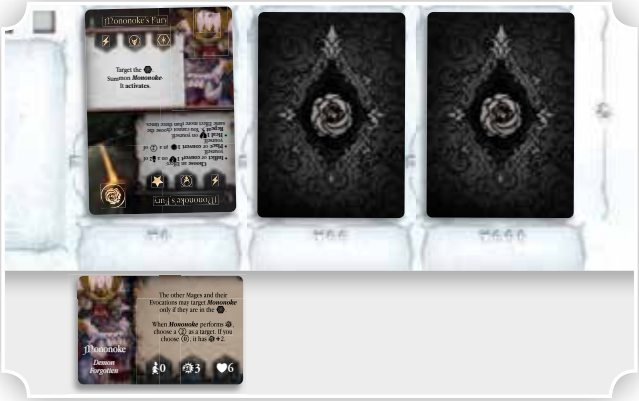
Mage Model

MAGE CARD

- **A Name.**
- **B ♥ Health Value**: The maximum amount of 💔 **Damage** that can be inflicted on the Mage before they are defeated (see page 18). The △ arrow makes it easier to visualize after how much inflicted 💔 is the Mage defeated.
- **C Hand Value:** The maximum number of Spell Cards the Mage can have in their Hand (see page 13).
- **D Strength Value:** The amount of 💔 **Damage** the Mage inflicts on the target when performing a Physical Attack (see page 14).
- **E Speed Value:** The number of "Move 1" Effects that the Mage can perform with a single *Explore* Physical Action (see page 14).
- **F Maximum Quest Value:** This value is not taken into account in a game of *Black Rose Wars Duel*. However, it is used in other products in the *Black Rose Wars* line.
- **G Trophy Token Slot:** This slot is not taken into account in a game of *Black Rose Wars Duel*. However, it is used in other products in the *Black Rose Wars* line.
- **H Physical Action Token Slots:** These slots accommodate the player's two Physical Action Tokens.

- Evocations and Equipment

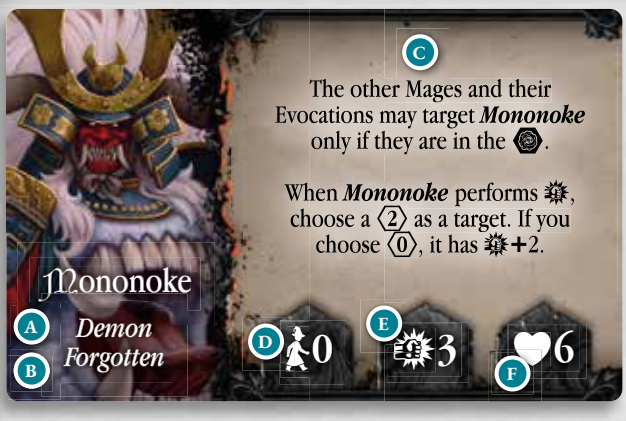
An Evocation is a Model summoned by a Mage to help and support them during the game. Usually an Evocation has a corresponding Model that represents it in the Lodge and an Evocation Card that describes its characteristics. In this box, the only Evocation that has a Model is ***Mononoke***.



SUMMONING MONONOKE

A Mage may Summon ***Mononoke*** by casting the Forgotten Spell ***Mononoke's Fury*** and resolving the Effect on its light side (see **Spell Card Anatomy** on page 13).
When they do, they take the Model of ***Mononoke*** and place it in the Lodge following the instructions of the Effect that summons it. Then they take their Evocation Card and place it in one of the three Evocation slots on their side of the board.

EVOCATION CARD AND EQUIPMENT EVOCATION CARD ANATOMY



EVOCATION CARD

- **A Name.**
- **B Archetype:** Evocations have one or more Archetypes that influence them through specific Effects.
- **C Skills**: These represent one or more unique Effects available to the Evocation.
- **D Speed Value:** The number of Rooms the Evocation can move when activated. ***Mononoke*** has a speed of 0, therefore it can't leave the Room it's in unless an Effect moves it.
- **E ✸ Strength Value:** The 💔 Damage inflicted by the Evocation when performing a ✸ Physical Attack. ***Mononoke*** inflicts **3**💔 when attacking a target with a ✸ Physical Attack.
- **F ♥ Health Value:** How much 💔 the Evocation can suffer before being defeated. When ***Mononoke*** has suffered **6**💔 it is defeated (see **Evocation's Defeat** on page 18).
- **G ⊘ Room Invulnerability:** This equipment does not suffer any 💔 **Damage** inflicted by Effects targeting ⬡ **Rooms**.

EQUIPMENT EVOCATIONS

In this box you will find Evocations with the **Equipment** archetype, a subtype of Evocations that don't have a Model representing them in the Lodge, and follow specific rules:

- An Equipment can be targeted as if it were an Evocation located in the Room where the Mage who owns it is (⟨0⟩), but it can't be moved in any way from the Room where the Mage who summoned it is.
- If an Equipment card displays the ⊘ **Room Invulnerability** symbol, that Equipment ignores any 💔 **Damage** inflicted by Effects that target ⬡ **Rooms**.
- It is not possible to assign Upgrades (found in other products in the *Black Rose Wars* line) to an Equipment.
- A Mage cannot own more than one Equipment with the same name.
- An Equipment item can only be Summoned by an Effect with a target ⟨0⟩.
- An Equipment, despite being considered an Evocation, **doesn't activate**, but provides an Effect that can be used by the owner. This means that an Equipment **can't be activated** by another Effect or by the Physical Action *Command*, and doesn't activate during the **Evocations Phase** (see page 15).

- Power Points

To win the game, the Mages must accumulate **Power Points**. When this happens, the Mage (or the **Black Rose**) who gained moves their Power Token on the Power Track on the board by a number of spaces equal to the gained. Whoever has the most at the end of the game is the winner (see *End of Game Tally* on page 17). **Power Points** can be gained in various ways, such as Inflicting **Damage** on opposing Mages, placing **Instability** in Rooms or Completing Quests.

- Spell Cards

Mages use **Spell Cards** to unleash powerful Effects within the Lodge.
There are three types of Spell Cards: School Spell Cards, Personal Spell Cards and Forgotten Spell Cards (see **Spell Card Anatomy** on page 13).

SCHOOL SPELLS

The School of Magic (Shugendō in this box) consists of a Deck of 36 School Spell Cards (12 different Spell Cards, 3 copies each). This deck makes up the **Library**.

PERSONAL SPELLS

Each Mage is given three copies of their Personal Spell Card. The illustration shows the Mage with whom the cards are associated.

FORGOTTEN SPELLS

Forgotten Spells allow you to unleash extremely powerful Effects from ancient times. These Spell Cards have unique graphics that distinguish them, and can only be drawn by Effects such as the **Spiritual Black Rose Room**.

Cells

These two spaces on the board are where the Mages' Models are placed at the beginning of the game. Each Mage is paired with the Cell on the side of the board that belongs to their player (as indicated by the color). When a Mage is defeated, place them in their Cell.
For the complete rules on Cells, see page 19.

Events Card and Quests Cards

The Event Card indicates the Effects that the **Black Rose** applies at the beginning of each game Turn to influence the game and try to win (see page 12).

Quest Cards show six **Quests** available to players to gain additional points during the game. For the complete rules on **Quests** see page 22.

- Damage/Instability Cubes

Each Mage has 25 cubes of their own color available to them. The 25 black cubes are used to track effects related to the **Black Rose**, the entity that dwells in the Lodge and participates in the game as a third player..
The Game Effects indicate whether to use a **Cube** to inflict **Damage**, the wounds that the Mage causes to their opponents, or to place **Instability**, magical energy that the Mage releases in the Rooms of the Lodge.
The Damage/Instability Cubes are also used during the game for other purposes besides those just described, such as keeping track on the board of which Turn is in progress, or of a Mage's progress along the different Tracks on the board.
Players must use their cubes wisely, because once they run out, they won't be able to perform Effects that require the use of cubes.

Whenever an Effect requires a player to place more cubes than they have left, the Effect is resolved using all the available cubes. The missing cubes are not used, and therefore the Effect is only partially resolved.
If an Effect requires a player to use more cubes than the number of cubes available to them, they can use the available cubes as they wish (for example, if a Spell inflicts **3** each on **two** Models and the player only has four cubes available, they can distribute those four cubes as they wish among the two Models).

Effects and Targets

EFFECTS

The game often refers to Effects. Most of the game components and each Physical Action (see page 14) have Effects, which are composed of one or more phrases and/or symbols that allow you to influence the game. Each phrase that makes up an Effect must be applied, starting with the first one and proceeding in order. If a phrase can't be applied in its entirety, the parts that can't be applied (even all of them) are applied as far as possible or skipped, and you move on to the next phrase. An Effect is considered **resolved** when you have attempted to apply all the phrases that comprise it, even if it wasn't possible to apply any of them.
Effects can be found on the following game components:

A Events Card

B Quests Cards

C Room or Room Activation Token

D Spell Cards: see page 13.
E Unstable Spell: see **Cast a Spell** on page 14.
F Light Side Effect: See page 13.
G Dark Side Effect: See page 13.

Physical Actions

Physical Actions (✚) allow you to perform a series of different Effects (see page 14).

TARGETS

The Effects of Spells and other game components always have a specific target that must be chosen from among those available by whoever resolves the Effect.
The target of an Effect is always indicated before the text of the Effect itself, followed by a colon (👤0:) H, except for the Targets of Spell Card Effects, which are shown in the third banner below the Spell name I.

Targets can be:

- 👤 **Model:** The effect can target a Model **other than** the Model that resolves the Effect. The number next to the icon (👤0, 👤1, 👤2) indicates the range, i.e., the maximum number of rooms that the target of the Effect can be away from the Model that resolves the Effect. To choose a target **it must be possible** to draw a straight line between the Room the target is in and the Room the Model that resolves the Effect is in, without the line being blocked by Room walls. If the icon is followed by an asterisk (👤*), the effect may target a model anywhere in the Lodge regardless of distance, and even if it's not possible to draw a straight uninterrupted line as indicated above.
- 👤 **Mage Model:** As for 👤 **Model**, however, only the Model of a Mage other than themselves can be targeted.
- **Evocation Model:** As for 👤 **Model**, however, only the Model of an Evocation can be targeted.
- ⬡ **Room:** The Effect targets a Room and affects all opposing Models (Mages and their Evocations) inside that Room, or the Room itself. The number inside the icon (⟨0⟩, ⟨1⟩, ⟨2⟩) indicates the range, i.e., the maximum number of rooms that the target Room of the Effect can be away from the Model that resolves the Effect. To choose the target Room, **it must be possible** to draw a straight line between the target Room and the Room where the Model that resolves the Effect is located, without this line being blocked by Room walls. If the icon contains an asterisk (⟨*⟩), the Effect may target a Room anywhere in the Lodge regardless of the distance and even if it's not possible to draw a straight uninterrupted line as indicated above.
- 👤 **Personal:** These Effects target the mage who resolves them.
- ★ **Special:** This Effect has no target. The Effect's text indicates how to apply it and which game elements are influenced by it.

For examples and in-depth rules on Targets, Range and Line of Sight see page 21.

RESOLVING MULTIPLE EFFECTS

During the game, it may happen that more than one Effect has to be resolved when a certain condition occurs or while another Effect is being resolved. When this happens, the Effect being resolved is resolved up to the period (.). Then it stops and each Mage (or the 👤) may resolve one or more interrupting Effects in Play Order. When all the Effects have been resolved, the interrupted one is resolved starting from the period (.) where it was interrupted.

Setup

Follow the steps below to set up the game:

1. Open the **game board** A and place it in the center of the table.

2. Place the **Spiritual Black Rose Room** B in the center of the board with the Intact side face up, i.e. the side showing the Instability Slots (the holes).
   Shuffle the six remaining Rooms and place them randomly around the Spiritual Black Rose Room according to the board layout and with their Intact side face up.

3. Place the **Events Card** C on the corresponding space on the board, so that one of the two sides is visible, chosen randomly or by mutual agreement. For each of the two **Quests Cards** D, choose which side will be turned face up by mutual agreement, or choose randomly. Then place them in the corresponding spaces on the board.

4. Place the **Room Activation Tokens** E on each Room with the same name, with the Available side face up. Place the **Black Rose Damage/Instability Cubes** (black cubes) F next to the Game Board, so that they are within easy reach of both players.

5. The player who last received a rose (or a randomly selected player) obtains the **Crown Token** (♛) G, becoming the **Crown Holder**.

6. Starting with the Crown Holder, each player chooses a color and sits on the side of the board that corresponds to that color. Then they take the **Damage/Instability Cubes**, the **Physical Action Tokens**, the **Persistence Tokens** and the **Power Token** corresponding to that color H.
   The player then chooses a **Mage**, takes the corresponding **Model** and places it in the Cell I of their color. They take their **Mage Card** and place it on the corresponding space on their side of the board and place their Physical Action Tokens J on it with the Available side face up. They then take their three **Personal Spell Cards** belonging to their Mage K and keep them face up in front of themselves.

7. Take the **Shugendō School of Magic** deck and place it next to the game board so that it is within reach of all players. Place the **School Reference Card** L under the School of Magic deck as shown in the image. This deck is referred to as the **Library** M.
   Shuffle the available **Forgotten Spells** and form a deck, place it next to the game board in the space provided N.
   Place the deck of **Evocation Cards** within reach O.

8. The **Crown Holder** takes the **School Reference Card** L from the Library and selects one of the two **Starting Grimoires** E listed on it. The player looks through the School of Magic deck and takes a copy of each of the six cards listed, then adds one of their Mage's Personal Spell Cards to them and shuffles them together. This deck of seven cards is their **Grimoire**; they place it in the space provided on their side of the board (📖) P, then takes their other two Personal Spells and places them face up in the Memories slot (🧠) on their side of the game board Q. The other player does the same, but chooses the Starting Grimoire that the Crown Holder didn't choose.
   Once this process is finished, shuffle the remaining School of Magic cards in the Library and place the deck back on the side of the board above the School Reference Card.

9. Each player places one of their Damage/Instability Cubes on space **0** of the **Trophy Track** (🏆) and one on space 0 of the **Rooms Track** (⬡) on their side of the game board R; then they place their **Power Token** on space **0** of the Power Track S.
   The Crown Holder places a Black Rose Damage/Instability Cube on space **0** of the **Trophy Track**, the **Rooms Track** T and the **Turn Track** of the Black Rose U; then they place the Black Rose Power Token on space **0** of the **Power Track** V.

10. Place the two **Portals** of the same color on the entrances indicated in the image W. If both players agree, place the other two Portals on the entrances indicated in the image X to have a Lodge with more connected Rooms.

Now the game can begin!

L SCHOOL REFERENCE CARD ANATOMY

Game Turn

A Game Turn consists of five Phases to be played in the order indicated below.

1. **Black Rose Phase**
2. **Study Phase**
3. **Action Phase**
4. **Evocation Phase**
5. **Clean-up Phase**

GOLDEN RULE

A specific rule indicated on a game component takes precedence over the general rules in this rulebook.

CROWN HOLDER AND PLAY ORDER

The Mage who owns the **Crown Token** is called the **Crown Holder**. At the beginning of each **Phase**, the Crown Holder is considered the **First Mage** until the end of that phase. The Crown Holder has the final say on any ambiguous situations that may arise during the game.

Play Order: On many occasions, you will be instructed to resolve an Effect in "play order." This means resolving the Effect starting with the first Mage, then proceeding to their opponent.

1. Black Rose Phase

Consult the **Event Card** and apply the corresponding Effect to the current Turn (indicated by the Black Rose **Cube** on the corresponding track). **These Effects always affect the Mages, even if they are in their Cell** (see page 19).

2. Study Phase

In this Phase, resolve the following steps in order:

2.1 DRAW

Starting with the First Mage, each Mage draws **2** **Spell Cards** from their **Grimoire** (A) and **2** **Spell Cards** from the **Library** (B).
If a Mage must draw from the **Grimoire** but there aren't enough cards in it, the Mage shuffles their **Memories** (C) (their discard pile) and uses those to form the **Grimoire** again. After doing so, they continue drawing.

2.2 HAND LIMIT

If, after drawing the **Spell Cards**, a Mage has more cards in their Hand than the **Hand Value** (D) indicated on their Mage Card, they must discard (into their **Memories**) until they are equal to that value.

2.3 PLANNING

After carefully reading the two Effects of the Spell Cards in their Hand (Light Side Effect, indicated by an arrow to the left of the Spell name, and Dark Side Effect, indicated by a crescent moon to the left of the Spell name), each Mage places **2** to **4** of the **Spell Cards** from their Hand on the **Spell Slots** (E) on their side of the board (**Quick Spell Slot**, Slot **I**, Slot **II**, and Slot **III**).
These cards are placed face down with the chosen side (Light or Dark) facing the Mage who placed them. This side is called the **Active Side**, and its Effect will be the only one used during the next **Action Phase** (see below).
Spell Cards positioned in this way are considered **Ready Spells.**

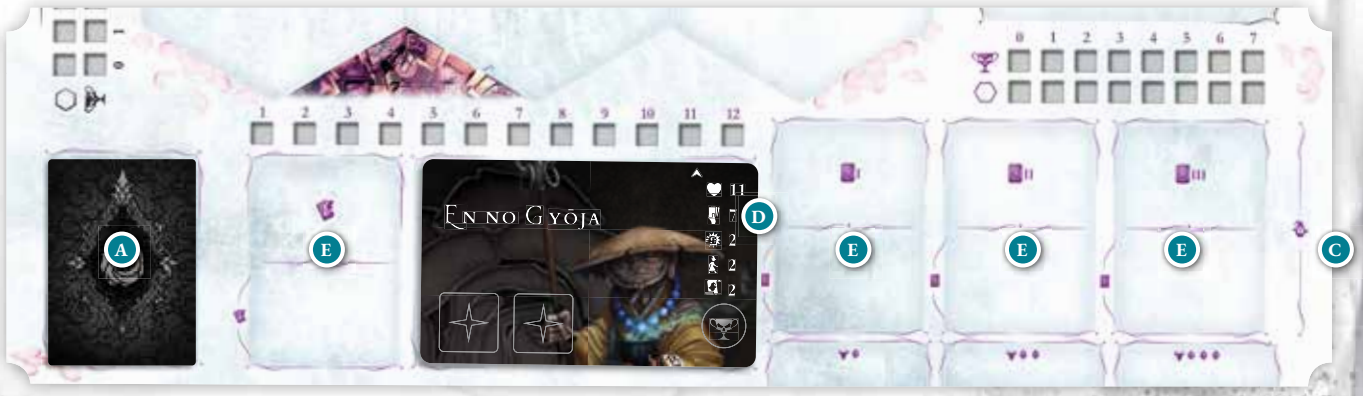
Please Note: To decide which of the two card effects to use later in the Turn and the order in which to place the **Spell Cards**, please refer to the *Targets* paragraph (on page 11) and the detailed rules in the *Rules Compendium* (on page 17),

SPELL CARD ANATOMY

- (A) **Name.**
- (B) School of Magic Symbol.
- (C) Effects, one on the **Light Side** and one on the **Dark Side**.
- (D) **Spell Type:** Combat, Contingency. Some effects may refer to the type of Spell to be resolved.
- (E) **Elements:** A Spell's Element is used in specific situations that may occur during the game. The Elements are: Air, Earth, Fire, Water, Sacred, Profane, Arcane, any Element (when necessary, the Mage who owns this Spell chooses an Element that this symbol represents, and it will represent that Element until the end of the current Activation).
- (F) **Target:** The type of Target and the range of the Effect (see page 9).
- (G) **Unstable Spell:** See **Cast a Spell** on page 14.

SPELL CARD STATUS

A Spell Card may have different statuses:
Ready Spell: This is a Spell Card that is face down in a Spell Slot on the board.
Revealed Spell: This is a Spell Card that is face up in a Spell Slot on the board, is no longer considered a Ready Spell.



3. Action Phase

The First Mage (the Crown Holder) performs their **Activation**: they are considered the **active** Mage and can resolve **up to two Actions** from those indicated in the Actions box on the right. When the First Mage has resolved up to two Actions, the other Mage performs their **Activation** and does the same. This continues until both Mages have no more Actions to perform, at which point the Action Phase ends.

Please Note: If a Mage is in their Cell, they have a limited number of options available to them. See the *Cells* paragraph on page 19.

PHYSICAL ACTION TOKENS

To perform a Physical Action (see box on the right), you must flip an Available Physical Action Token so that it shows the Exhausted side.

A **Available Physical Action Token.**

B **Exhausted Physical Action Token.**

EXAMPLE: REVEALING A SPELL CARD

When a Mage **reveals** a **Ready Spell**, they must flip it upwards in a manner that swaps the positions of the two short sides of the **Spell Card**.

The Effect that is now legible is the Effect that will be applied. This should be the Effect that the Mage chose during the Study Phase.

ENTERING A ROOM

Regardless of how a Model is placed in a Room (moved, summoned, placed, or other), it is considered to have entered the Room.

ACTIONS

During their Activation, a Mage must perform one or two of the Actions described in this box.

To perform a Physical Action, the Mage must Exhaust (see box on the left) one of their Available Physical Action Tokens (✚). A Physical Action is considered **a group of separate and distinct Effects, and they are resolved in the order the Mage prefers**; a Mage may also choose to ignore some or all of these Effects.

Explore (Physical Action, ✚)

- Move 1. You can perform this Effect a number of times equal to your **Speed Value**. Each individual "Move 1." separated by a period (.) is a different Effect, and all or only some of them may be used. You cannot use other Effects between one "Move 1." and another. Unused "Move 1" effects are lost.
- Activate a ⟨0⟩ (see page 20, *Activate a Room*).

Example: You can move to an adjacent Room, then move to another adjacent Room, and then activate the Room you are in. Or, you can move to an adjacent Room and activate the Room you are in. Or, you can activate the Room you are in and then move, but you can't move to an adjacent Room, activate it, and then move to another adjacent Room.

Fight (Physical Action, ✚)

- Perform a Physical Attack on a 0 (A Physical Attack inflicts **Damage** equal to your **Strength Value**).
- Activate a ⟨0⟩ (see page 20, *Activate a Room*).

Example: You can perform a Physical Attack and then activate the Room you are in, or you can activate the Room you are in and then perform a Physical Attack.

Command (Physical Action, ✚)

If you summoned ***Mononoke***, target it and perform the Evocation's Activation Effect (see page 15).

Cast a Spell

Choose one of your **Ready Spells** (face down) that is in the Spell Slot with the lowest number (I, II, III), or the one in the Quick Spell Slot ().

Reveal that Ready Spell by **flipping it over so that its short sides are reversed** (see example). You are considered the Mage **casting** that Spell.

If you reveal a Spell that features the Instability symbol () in the center of the card, resolve the **Unstable Spell** Effect (see page 19), then resolve the Active Side Effect of the Spell Card (the one you can read, with its text right side up) choosing a target for it if necessary.

Momentum

Choose one of your Ready Spells and discard it to your Memories. When you do, you may perform "Move 1."

LIMIT ON ACTIONS

A Mage may perform the same Action multiple times during the same Activation. However, they may only perform the Cast a Spell Action twice if one of the two Actions is used to cast a Spell which is in the **Quick Spell Slot.**

4. Evocation Phase

During this phase, all Evocations in the Lodge that are not of the Equipment Archetype activate. Among those in this box, the only Evocation that can activate is ***Mononoke***, unless it is in play as an Avatar (see page 24); in this case, nothing happens during this phase. During this phase, the Mage who summoned ***Mononoke*** may activate it. If there are no Evocations in the Lodge, or if ***Mononoke*** has already been activated in this phase, the phase ends.

This box contains Evocations with the Equipment Archetype, a subtype of Evocations that don't have a corresponding model in the Lodge and follow specific rules described on page 7.

MONONOKE ACTIVATION

When ***Mononoke*** activates, its controller must resolve the **Evocation's Activation Effect** (see box).
Mononoke uses its controller's damage cubes to indicate the damage it inflicts. This damage is considered to be inflicted by the Evocation, not by the Mage controlling it.

EVOCATION'S ACTIVATION

Target: *The target of the* ***Evocation's Activation*** *is specified in the Effect that causes it to be resolved.*
Resolve each of the following points once in the order you prefer:

- Move the Evocation 1. You can perform this a number of times equal to its **Speed Value.** Each individual "Move 1" is considered to be separated by a period (.); unused "Move 1" Effects are lost.
- The Evocation performs a **Physical Attack** against a 0.

OTHER EVOCATIONS IN DUEL

By using Evocations from other products in the *Black Rose Wars* line, you can include new Evocations in a game of *Black Rose Wars: Duel - Kami*. For complete rules on how to use Evocations, please refer to the online rulebook, accessible via the QR code.

5. Clean-up Phase

This is the final Phase of the Game Turn. Perform the three steps below in order:

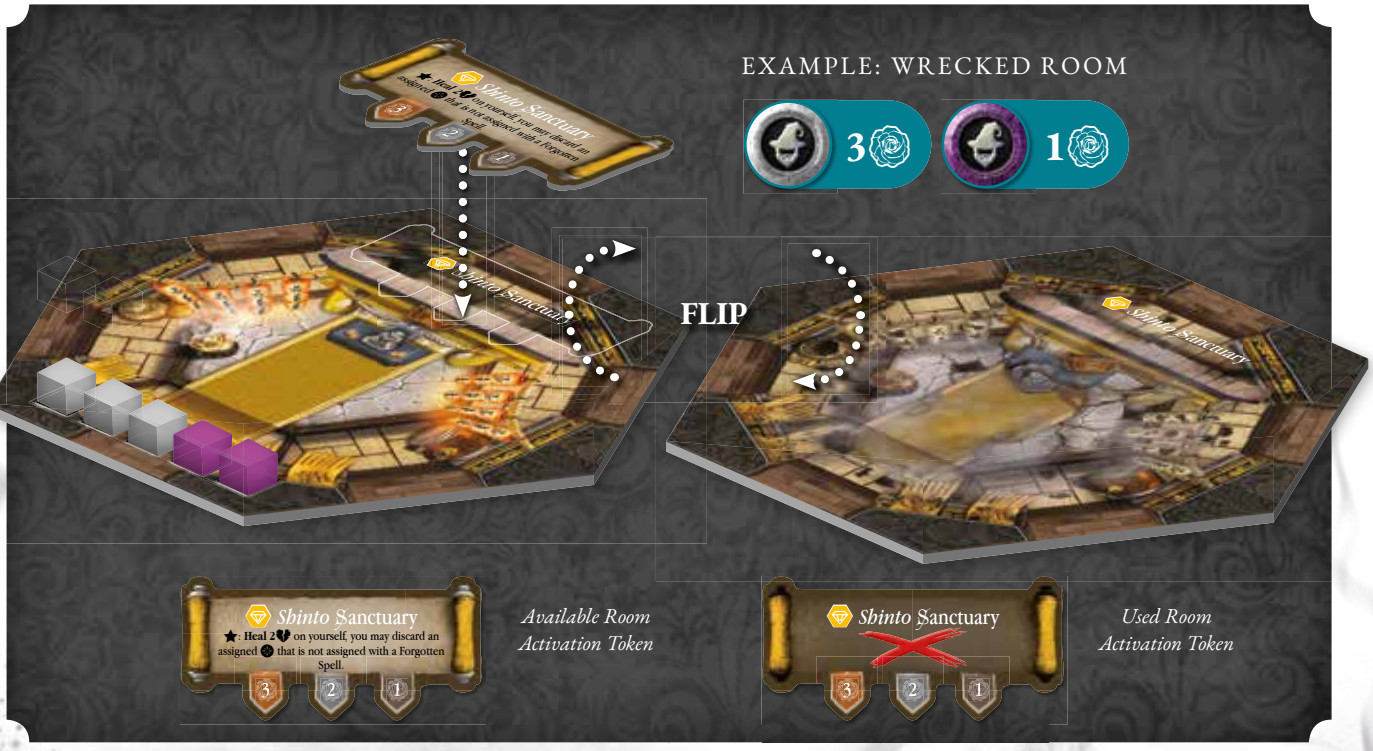
1. **Game Board Clean-up:** All Mages discard the **Spell Cards** on their Spell Slots into their **Memories**.
   All **Revealed Forgotten Spells** are removed from the game (they are not returned to the Forgotten Spells deck).
   All **Persistent Tokens** are returned to their respective owners.
   Each Mage turns their **Physical Action Tokens** to the Available side.
   All **Room Activation Tokens** showing the Used side are turned to the Available side.

2. **Majority and Wreckage:** Check if there are any Rooms in the Lodge with all Instability Slots occupied; these Rooms must be Wrecked one at a time in any order.
   For each Room that is Wrecked, assign the Power Points (PP) indicated on the three banners in the room to the Mages and/or the Black Rose based on the number of **Instability** they have placed in the Room:
   1. The greatest amount of PP (the leftmost number) to the Mage (or to the Black Rose) who placed the most **Instability**. If all Instability Cubes in the Room belong to a single Mage (or to the Black Rose), they gain **1** additional PP. **Whoever gains these points moves their cube one space forward on the Room Track on their side of the Game Board**. In the case of a tie between Mages or between a Mage and the Black Rose, the Black Rose advances the cube on her own Room Track.
   2. The intermediate amount of PP (the middle number) to the Mage (or to the Black Rose) who placed the second highest number of **Instability**.
   3. The smallest amount of PP (the rightmost number) to the Mage (or to the Black Rose) who placed the fewest **Instability**.

   In case of a tie, all Mages (and the Black Rose) who tied gain **1** less PP than indicated on the banner, down to a minimum of **1** PP.

   Once the PP have been assigned, the cubes in the Instability slots in the Room return to their respective owners and the Room is flipped to the Wrecked side; remove the corresponding Room Activation Token from the game.
   When a Room is Wrecked, nothing happens to the Mages and Evocations inside it, simply return the Models to the Room once it has been flipped. A Wrecked Room is not flipped again for the rest of the game and cannot be activated.

3. **End of Turn:** If the cube on the Turn Track is on slot 4, the game ends and you move on to the **End of Game Tally** (see page 16). Otherwise, the Crown Holder moves the cube on the Turn Track one slot forward to the next number, then passes the **Crown Token** to the other player, who becomes the new Crown Holder. In this case, the new Game Turn begins again from Phase **1. Black Rose Phase.**



End of Game Tally

At the end of the game, the End of Game Tally is performed to determine who is the winning Mage, or if the **Black Rose** has defeated all the Mages.

The Mages and the **Black Rose** advance their respective Power Tokens on the Power Track on the board according to the points indicated below (remember to flip the Power Token so that it shows the value +20 and place it at the beginning of the Power Track if you exceed **19**, and to replace it with the Power Token showing the value +40 if you exceed **39**).

- **Trophies: +3** to whoever has their cube in the most advanced position on the **Trophy Track**. In case of a tie, **+2** to everyone who has the cube in the most advanced position on the track.
- **Majority:** Check who has the most **Instability** in each of the Intact Rooms. For each Intact Room in which a Mage (or the **Black Rose**) has the most Instability, they advance their cube on their **Room Track** by one space. In case of a tie, the **Black Rose** advances the cube on her own Room Track (provided she has at least **1** in the Room). After all Intact Rooms have been checked, the Mage who has their cube on the most advanced position on the Room Track ()gains **3**. In case of a tie, **+2** to all players who have their cube on the most advanced position of the Room Track.
- **Quests: :** The **Black Rose** gains the indicated on each **Quest Slot** of the Quest Cards not covered by a Cube.

Once all the **Power Points** have been added up, the player with the highest score wins. In the case of a tie between two Mages, or between a Mage and the **Black Rose**, the **Black Rose** wins. The winning Mage becomes the new **Grand Magister of the Lodge of the Sun**. If the **Black Rose wins**, no participating Mage is worthy of this title!

Rules Compendium

This chapter contains all the rules that are not tied to a specific phase of the game, but that must be followed when the situation requires it. You'll also find several examples of how to apply the rules in different situations.

Inflicting/Converting Damage, Defeat and Immunity

INFLICTING DAMAGE

When a Mage or the **Black Rose inflicts Damage** to a Model, they must place the corresponding number of their own **Cubes** on the free Damage Slots to the left of the Mage's Health Bar, or in the case of an Evocation, place them on its card; those cubes are considered **Damage**.

CONVERTING DAMAGE

When a Mage or the **Black Rose converts Damage** on a Model, they must replace Damage cubes on it belonging to the other Mage or the Black Rose with their own cubes, up to a number of **Damage** equal to that indicated by the Effect that allows conversion.

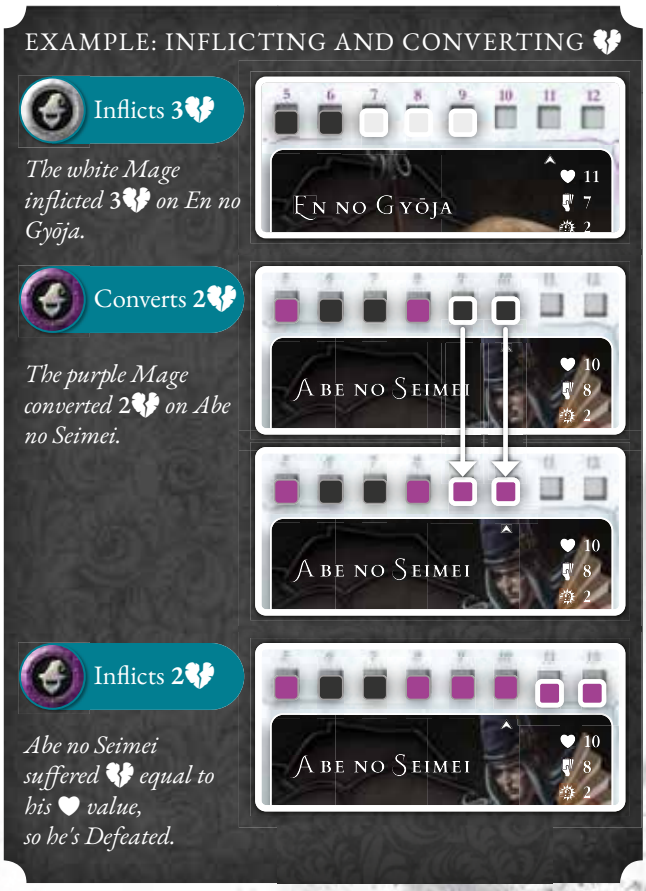
The **Black Rose converts Damage** starting from the rightmost cubes in the Health Bar, while a Mage can freely choose which cubes to convert.

A Mage cannot convert Damage on themselves and/or on Evocations they own or control in any way, and vice versa.

IMMUNITY

Unless specified by the Effect, a Mage (or the) and its Evocations ignore any Effect resolved by that Mage (or the) that inflicts or converts Damage on themselves and their Evocations.

An Evocation cannot inflict Damage on the Mage who summoned it or on another Evocation under that Mage's control.



DEFEAT OF A MAGE

When a Mage has suffered 💔 **Damage** equal to their Health value (♥), or when an Effect declares their defeat, the Effect currently being resolved is resolved up to the next period (.), then its resolution is interrupted and that Mage must resolve the **Mage's Defeat** Effect (see below).

The Mage is considered defeated when they resolve the **Mage's Defeat** Effect phrase that declares them defeated. Once the **Mage's Defeat** is resolved, the previously interrupted Effect resumes resolving from the period (.) where it was interrupted.

MAGE'S DEFEAT

: You are defeated. Place yourself in your Cell. The Mage (or the) who inflicted the last 💔 on you (even if it was inflicted by one of their Evocations) advances their cube on the **Trophy Track** (🏆) by one space.

The opponent who inflicted the most 💔 on you **gains** 4, the other **gains** 1. If both opponents inflicted the same number of 💔, on you, each of them **gains** 3. If all 💔 that you suffered were inflicted by the same opponent, they **gain** 5.

Return all ❐ on your Health Track to their respective owners.

If multiple Mages are defeated at the same time, the **Mage's Defeat** Effects are resolved in play order.

DEFEAT OF AN EVOCATION

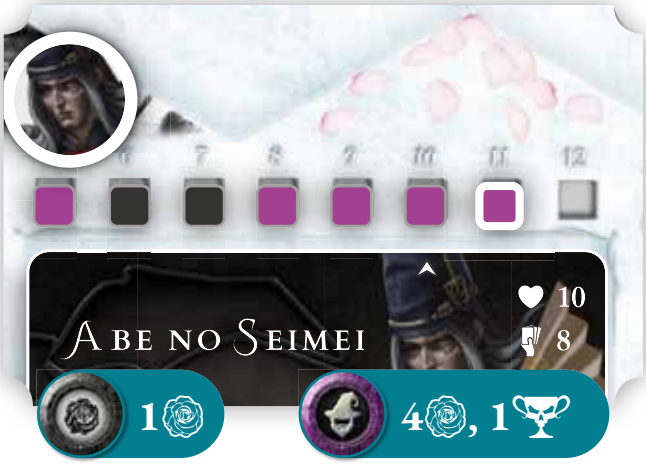
When an Evocation suffers 💔**Damage** equal to its Health value (♥), or when an Effect declares it defeated, the Effect currently being resolved is resolved up to the next period (.), then its resolution is interrupted and the owner of that Evocation must resolve the **Evocation's Defeat** Effect (see below) targeting the defeated Evocation.

The Evocation is considered defeated when the **Evocation's Defeat** Effect phrase resolves and declares it defeated. Once the **Evocation's Defeat** Effect is resolved, the previously interrupted effect resumes resolving from the period (.) where it was interrupted.

EVOCATION'S DEFEAT

: The Evocation is defeated. Take the Evocation Model out of the Lodge. Return all ❐ on its Evocation Card to their respective owners, and discard that card, returning it to the Evocation Card deck.

If multiple Evocations are defeated at the same time, the **Evocation's Defeat** Effects are resolved in play order.



OBTAINING AND DISCARDING TROPHIES 🏆

If an Effect indicates that a Mage **discards** Trophies, that Mage must move the cube on their Trophy Track back a number of spaces equal to the Trophies they would discard, returning to a minimum value of 0.

If an Effect indicates that a Mage **gains** Trophies, that Mage must advance the cube on their Trophy Track by a number of spaces equal to the Trophies they would gain.

REMOVING AN EVOCATION

Some effects indicate that you remove an Evocation: when this happens, the effect that is currently being resolved resolves up to the next period (.), then its resolution is interrupted and the owner of that Evocation must resolve the **Evocation Removal** Effect (see below) targeting the removed Evocation. Note that a removed Evocation is not considered defeated.

EVOCATION REMOVAL

: Remove the Evocation from the Lodge. Return all ❐ on its Evocation Card to their respective owners, and discard that card, returning it to the Evocation Card deck.

If multiple Evocations are removed at the same time, the **Evocation's Removal** Effects are resolved in play order.

Placing/Converting Instability

PLACING INSTABILITY

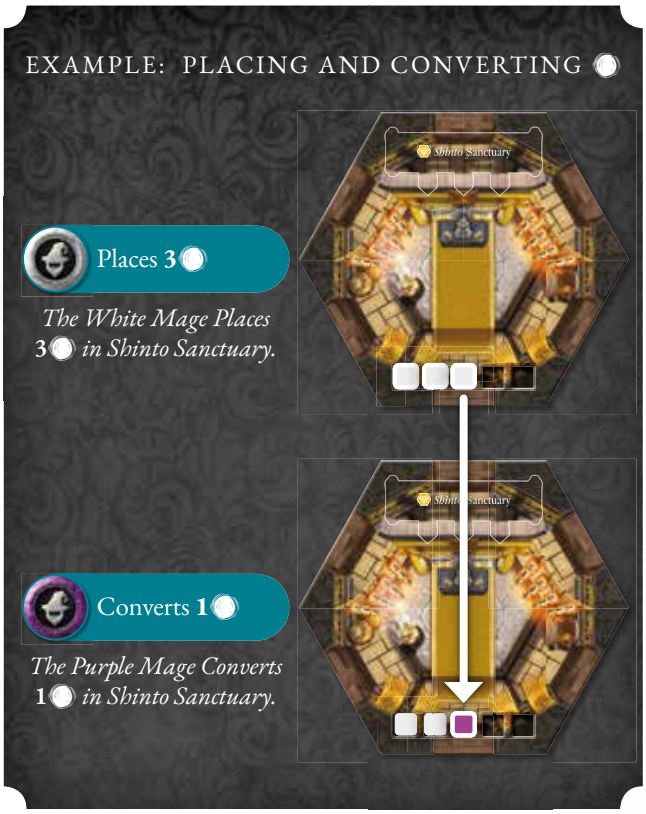
When a Mage or the **Black Rose places** **Instability** in a Room, they must place the corresponding number of their **Damage/Instability Cubes** on the free Instability Slots furthest to the left of the target Room. Cubes can only be placed in this way on free Instability Slots. If there are not enough, the excess cubes are not placed.

Some Spell Cards feature the symbol in the center of the card.
When a Mage reveals one of these Spells, they must immediately resolve the **Unstable Spell** Effect (see below) before resolving any other Effects of that Card:

A Room in which all Instability Slots are occupied by Instability Cubes will be flipped during the Clean-up Phase. (see page 16).

CONVERTING INSTABILITY

When a Mage or the **Black Rose converts** **Instability** in a Room, they must replace the Instability of the other Mage or Black Rose with their own cubes, up to a maximum of **Instability** equal to those indicated by the Effect that allows you to convert.
The **Black Rose converts** **Instability** starting from the cubes furthest to the right in the Room, while a Mage can freely choose which cubes to convert.



Cells

These two spaces on the board hold the Mage Models at the start of the game. Each Mage is matched to the Cell on their player's side of the board (identified by color).
Cells and the Mages inside them use the following rules:

- No Model may move, be moved, or be placed in a Cell; only the resolution of the Mage's Defeat Effect (see page 18), or an Effect that specifically indicates to do so allows a Mage Model to be placed in their Cell.
- A Mage in a Cell **may only** perform the following Actions:
  ► Activate their Evocations during the **Evocation Phase**.
  ► Perform the **Momentum** Action.
  ► Perform a Physical Action that allows them to exit the Cell.
  ► Resolve Persistent Effects of their Revealed Spells.
- When a Mage begins their Activation in a Cell, or is placed in a Cell during their Activation, and has the opportunity to perform an Action, they must perform a Physical Action that allows them to leave the Cell or a Momentum Action. If they cannot do so, they remain in the Cell.
- The Cell is not considered a Room of the Lodge and cannot be targeted.
- A Mage in a Cell is not considered part of the Lodge and cannot be targeted by Effects other than **Event Card** Effects, **Quest Card** Effects (see page 22), and Effects that specify that they apply to a Mage in their Cell.

Rooms and Room Activation Tokens

Each Room in the Lodge is represented by a hexagonal tile.
At the beginning of the game, each Room shows its Intact side, which allows Mages who activate the Room (see below) to use its Effect.
During the game, a Room can be Wrecked (see page 16, *Clean-up Phase*). A Wrecked Room has no **Room Activation Effect or Token**: the Room no longer produces Effects for the rest of the game.

ACTIVATING A ROOM

When a Mage activates a Room (for example, by resolving the "Activate a ⟨0⟩" Effect with an *Explore* or *Fight* action), they must resolve the Effect indicated on its **Room Activation Token**. They can do so as long as the token shows its Available side. The Mage then resolves the Effect indicated on it and then flips it over to show the Used side.
When this happens, the Effect of that Room Activation Token cannot be used for the rest of the Turn. A Mage who activates a Room with a Room Activation Token showing the Used side resolves no Effects.

ROOM ANATOMY

- **A** Name, symbol, color ( ) and Effect of the Room. The Lodge consists of 7 Rooms of different colors.
- **B** **Power Points Banners:** These indicate the gained if the Room is Wrecked (see page 16) and the Room's Effect. Once their Effect has been used, Room Activation Tokens are flipped to their Used side.
- **C** **Instability Slots:** These determine how much **Instability** can be placed in the Room (see page 19).
- **D** **Wrecked Room:** Displays the name, symbol, and color of the Room. Cannot produce any effects.

Intact Room

Available Room Activation Token

Used Room Activation Token

Wrecked Room

Range, Line of Sight, Dummy Target

RANGE

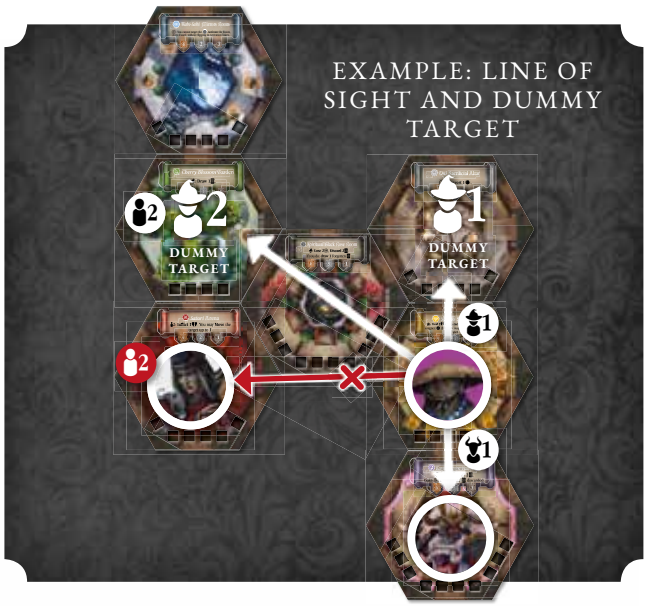
The numerical value of the targets is called range, and indicates the distance in rooms within which the target chosen for the Effect can be located. Ranges with a value greater than **0** (1 2 3 ⟨2⟩) require **line of sight** between the caster and the target.
A range * (* ⟨*⟩) or with a value of 0 (0 ⟨0⟩) **does not require** any line of sight.

LINE OF SIGHT

The line of sight is an imaginary straight line between the center of the Room where the Model resolving the Effect is located and the center of the Room where the target of the Effect or the target Room of the Effect is located. This line must always run through the centers of a row of Rooms, and can never run along the edge of a Room. The line goes through a maximum number of Rooms (excluding the starting Room) equal to the range indicated on the Effect target.

DUMMY TARGET

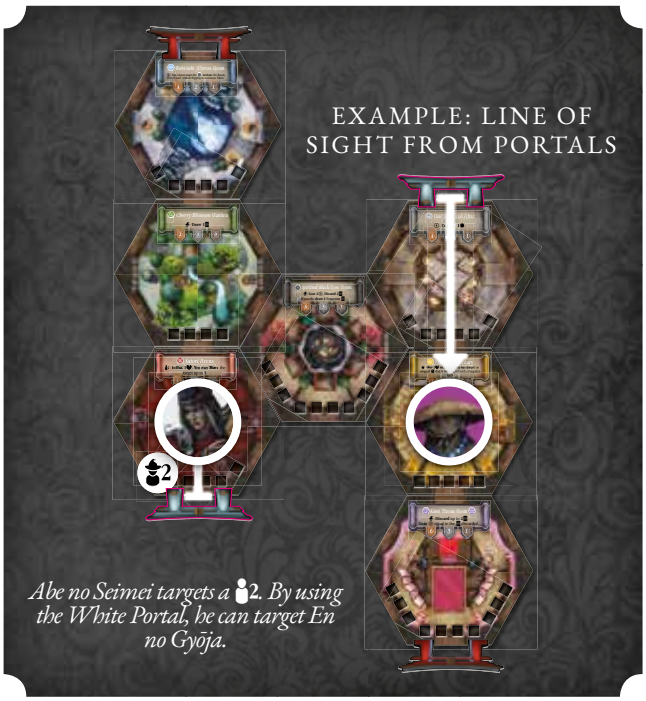
You may choose a **Dummy Target** as the target of an Effect that targets **Models** (). The Dummy Target counts as a Model, even if it isn't physically in the Lodge; the purpose of choosing it as a target is to allow Mages to cast a Spell and resolve as much of its Effect as possible, even when there are no Models available to target. A Dummy Target doesn't take damage and has no characteristics. **You cannot choose a Dummy Target as the target of a Physical Attack () of a Physical Action ()** (see page 14).



Portals

Portals are magical passageways that connect the rooms of the Lodge. Two Rooms that have a Portal of the same color in one of their entrances are considered adjacent and connected by that entrance, and all the normal rules for two adjacent Rooms apply to them (Line of Sight, Movement, etc.).

This box contains two pairs of Portals. The Setup section (see page 11) indicates how to place them in the Lodge. The instructions under Setup optimize the connections between the Rooms that form the Lodge. By experimenting with different Portal placements, you can create different Lodge configurations.



Quests

The two Quest Cards on the board feature six different **Quests** (A).

Each **Quest** is composed of these elements:

- (A) **Name**.
- (B) **Condition**.
- (C) **Effect**.
- (D) **Quest Slot**.

Before or after a Mage's Action (even if it is an opposing Mage performing the Action), or at the end of an Evocation's Activation, if a Mage fulfills or has previously fulfilled the **Condition** of a **Quest** during the current Turn, they may declare that they have completed it. When this happens, the Mage places one of their cubes on the Quest Slot of the Quest they have completed and immediately applies its Effect.

If two Mages declare completion of the same Quest at the same time, the Quest is completed by the active Mage. (see page 14, Action Phase).

If a Mage forgets to declare that they have completed a **Quest,** or doesn't want to complete it even though they have fulfilled the Condition, the **Quest** will remain available.

A **Quest** with the Quest Slot occupied by a cube is considered **completed** and **resolved,** and is no longer available to any of the Mages for the rest of the game.

In the End of Game Tally, the **Black Rose** gains from all **Quests** still available (see page 17).

Drawing/Discarding Spell Cards

When an Effect indicates to **Draw** one or more **Spell Cards**, unless otherwise specified, these cards must be drawn from your **Grimoire**.

When an Effect indicates to **Discard** one or more **Spell Cards**, unless otherwise specified, these cards must be discarded into your own **Memories** from your own Hand.

Persistent Effects

PERSISTENTS

A Persistent Effect influences the game for the duration of the Turn in which it is resolved. The player who resolved it can apply it each time the condition required in its text is met.

To show that one of these Effects is active, the Mage who resolved it takes the Persistent Token of their color that corresponds to the Spell Slot (, **I**, **II** or **III**) where the revealed **Spell Card** showing the Persistent Effect is located, and applies it to the target of the Effect. They place the Token on the Mage Card of the target if the target is a Mage, on the Evocation Card of the target if the target is an Evocation, or on the Room if the target is a Room.

The Persistent Effect ends when its **Spell Card** is no longer in play, after step 1 of the **Clean-up Phase**, or if the Persistent Token is discarded due to a game effect.

Keywords

An Effect may contain one or more of the following **Keywords**. When an Effect is resolved and a Keyword must be resolved, all rules described below that apply to that word must be applied.

REPEAT N

A Mage that resolves the keyword **Repeat N** can repeat the Effect it is part of as long as the value of N is greater than 0. Each time the Mage repeats the Effect, the value of N of that Effect's **Repeat** is lowered by 1 until the end of the current Activation.

This effect can be repeated 5 times. Each time it is repeated, the value of the keyword Repeat N is considered to be 1 less (Repeat 4 after one repetition, Repeat 3 after two repetitions, etc.).

The Mage may choose the same or a new valid target for the Repeat. This doesn't count as casting a new spell, and all repeats count as part of the Spell's Effect.

A different may be selected as the target of the Effect for each repetition. All repetitions count as a single resolved Effect.

If the keyword is followed by a cost after a colon (for example, **Repeat 2: discard 2**), each time the Mage Repeats the Effect, they must pay the cost, or they cannot repeat it.

Each repetition of this Effect requires discarding 1 from your hand. If the Mage cannot do so, they cannot repeat the Effect.

RESTORE

A Mage that resolves the keyword **Restore** turns one of their exhausted Physical Action Tokens to the available side.

Duel Avatar

The Avatar is the embodiment of the Black Rose's will in a physical body. It roams the Lodge carrying out the Rose's schemes and acting as her hand, granting power to those she deems worthy and punishing those who oppose her will.
Over time, many entities have served as Avatars for the Black Rose—mechanical knights born of alchemical powers, divine entities, or beings from the most remote lands. Even spirits from the world's most ancient legends have been servants of the Black Rose, and when she deems it necessary, she can summon them to her service.
In the Lodge of the Sun, a terrible Yokai, a nefarious spirit, has been chosen as an Avatar...

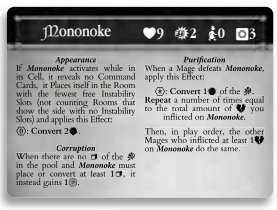
The Avatar is an Artificial Intelligence (AI) that can be used in any *Black Rose Wars: Duel* game, replacing a human player in a solo game or joining a two-player game as a third participant, making the Black Rose an even more challenging opponent.
The Avatar behaves similarly to a Mage, following most of the standard rules.

Mononoke

Mononoke is the Avatar provided in this box. This vengeful spirit has infiltrated the Lodge of the Sun to assassinate and devour the magical power of unworthy Mages who dare to challenge it.
Mononoke has three Skills described on the back of its Avatar Card. Read the Skills carefully before starting the game, as each one must be applied each time it is possible to do so.

Avatar Card, front

Avatar Card, back



Avatar play areas

- **A** Avatar Card
- **B** Grimoire/Hand
- **C** Avatar Cell
- **D** Avatar Health Track
- **E** Memories
- **F** Avatar Activation Token Space

Exhausted Avatar Activation Token

Avatar Setup

The Avatar is considered an additional virtual player.
The Avatar is a **Mage** (♟), just like those controlled by players. They participate in the game exactly like an additional Mage, but are also considered an extension of the Black Rose, and all ✿ symbols in the game **also refer to it**. The Avatar uses the Black Rose Power Token to indicate its Power Points. To use the Avatar in a game of *Black Rose Wars: Duel*, apply the following rules and modifications:

1. Once you have completed the normal Game Setup, take all the Avatar components: the Model, the Avatar Activation Tokens, the Avatar Card, and the Avatar Command Cards (divided into decks for the First Moon, Second Moon, and Third Moon, see box below).
2. Place the Avatar Model in the Black Rose Room.
3. Place the Avatar Card on the table next to the board so that its back is facing up. Take a number of Avatar Activation Tokens equal to the ◎ value indicated on the Avatar Card and place them in the corresponding slots on the game board **F** with the Available side face up.
4. Shuffle the Command Card Deck showing the **First Moon** symbol (see below) and place it next to the board in the **Grimoire/Hand** space **B**.
   The **Second Moon** and **Third Moon** Command Card Decks won't be used in the game, so set them aside.

Now the game may begin!

AVATAR DIFFICULTY

During step 4 of Avatar Setup, you may use a different Command Card Deck than the First Moon deck to make your Avatar more challenging.
Using the Second Moon Command Card Deck will make your Avatar moderately challenging, while using the Third Moon Command Card Deck will make your Avatar extremely challenging.

First Moon

Second Moon

Third Moon

If all players agree, you can also increase or decrease the Avatar's power by increasing or decreasing the number of **Avatar Activation Tokens** available to it throughout the game. Giving it one less Avatar Activation Token, the Avatar will be much less effective, and with one more it will become more formidable.

Avatar AI Rules

The Avatar acts in the game according to the rules of its Artificial Intelligence, summarized below:

CHOICE OF THE CROWN
The Crown Holder chooses on behalf of the AI from among the available options and in cases of doubt or a tie.

AVATAR AND BLACK ROSE CUBES
The Avatar uses the Damage/Instability Cubes of the (black cubes).
When the inflicts, places, or converts cubes, for example through Event Card or Quest Card effects, it counts as if the Avatar did so.
When the cubes of the are converted, it counts as if they were converted on the Avatar.

ASSIGNING DAMAGE TO MULTIPLE MODELS
Apply the following points in order when the Avatar must assign **Damage** to multiple targets:
- The Avatar assigns the Damage to the Mage who has the most of the assigned.
- The Avatar assigns the Damage to the Mage with the most assigned.
- If it must still assign , it assigns them to the other Mages.
- If it must still assign , it assigns them to Evocations.
- In all other cases, the **Choice of the Crown** applies.

DAMAGE/INSTABILITY CONVERSION
The Avatar converts Damage starting from the rightmost cube on the Mage Board, and converts Instability starting from the rightmost cube on the Room.

DEFEAT OF THE AVATAR AND ITS CELL
The Avatar is defeated like a normal Mage, however, when this happens, the player controlling the Avatar must resolve the Avatar's Defeat Effect (see below).
Please note that the Avatar doesn't have a Cell connected to the Lodge like the other Mages; its Cell is represented on the game board C.

AVATAR'S DEFEAT

: The Avatar is defeated. Place it in its cell. The Mage who inflicted the last (even if it was inflicted by one of their Evocations) advances their cube on the **Trophy Track** () by one space.
The opponent who inflicted the most **gains 4**, the other **gains 1**. If both opponents inflicted the same number of , each **gains 3**. If all were inflicted by the same opponent, they **gain 5**.
Return all on the Avatar's Health Track to their respective owners' reserves.
If the Avatar has at least one **Exhausted Avatar Activation Token**, flip one of them to the **Available** side.

The + symbol on the Cell serves as a reminder for the last sentence of the **Avatar's Defeat** Effect.
When the Avatar begins its Activation in its Cell, it follows the rules described in one of its Skills (*Appearance* for Mononoke) to return to the Lodge.

AVATAR AND EVENT CARDS
The Avatar ignores all Event Card Effects that refer to or target Mages.

AVATAR AND QUEST CARDS
The Avatar does not resolve Quests.

AVATAR AND BLACK ROSE DAMAGE
The Avatar never suffers damage from the .

AVATAR AND POWER POINTS
When the gains or loses **Power Points**, it counts as if the Avatar gained or lost those .

AVATAR CARD ANATOMY

- A **Name** and **Skill**.
- B **Health Value**: The maximum number of **Damage** Cubes **the Avatar can have on its Health Track before being defeated.**
- C **Strength Value:** The amount of **Damage** Cubes that the Avatar assigns to the target when performing a Physical Attack ().
- D **Speed Value:** Mononoke has a Speed Value of 0, it never leaves the Room it is in, but it can be moved by other Effects.
- E **Activation Tokens Number:** The number of Avatar Activation Tokens available to the Avatar during the game.
- F **Lore Text**.

Avatar Activation

The Avatar behaves as described below during the various Phases of the Game Turn.

1. Black Rose Phase
2. Study Phase
5. Evocation Phase

These Phases are resolved normally and the Avatar doesn't perform any Actions, unless otherwise indicated in its components or in specific rules. Remember, especially during the Black Rose Phase, what is indicated in the *Avatar and Black Rose Cubes* sections and in *Avatar and Power Points* on page 25.

3. Action phase

During the Action Phase, players activate their Mages as usual. After each of them has performed an Activation, if it still has at least one Available Avatar Activation Token, the Avatar turns one to the Exhausted side and activates, performing its Activation exactly as if it were the third Mage in the play order.

This means that in a game with two player-controlled Mages, the Activation order will always be:

Crown Holder Mage ► other Mage ► Avatar

The Avatar performs its Activation even if one or both of the other Mages have no more Actions to perform and skip their Activation. If, when it is time for the Avatar to activate, all of its Avatar Activation Tokens are exhausted, the Avatar doesn't activate until the next Action Phase.

When the Avatar activates, the Crown Holder reveals the top card of the Command Deck placed under the Avatar's **Grimoire/Hand** space and places it under the **Memories** space next to it. Then, resolve the card's effects one at a time, from top to bottom.

A Command Card can have one or two Effects, usually a **Physical Action** and a **Spell**.

Physical Actions resolve as regular Physical Actions, however applying the Effect as described on the card in order from top to bottom.

Spells resolve as regular Spell Effects.
When all Command Card Effects have been resolved, the Avatar Activation ends.

+1 Additional Command Card

Some Command Card effects contain the symbol +1, which indicates that, once the Effect has been resolved, another Command Card must be revealed and resolved during the same Avatar Activation. If the second card revealed also has an Effect containing the +1, symbol, once the Effect has been resolved, another Command Card must be revealed and resolved, with no limit to how many times this can happen.

Persistent Effects

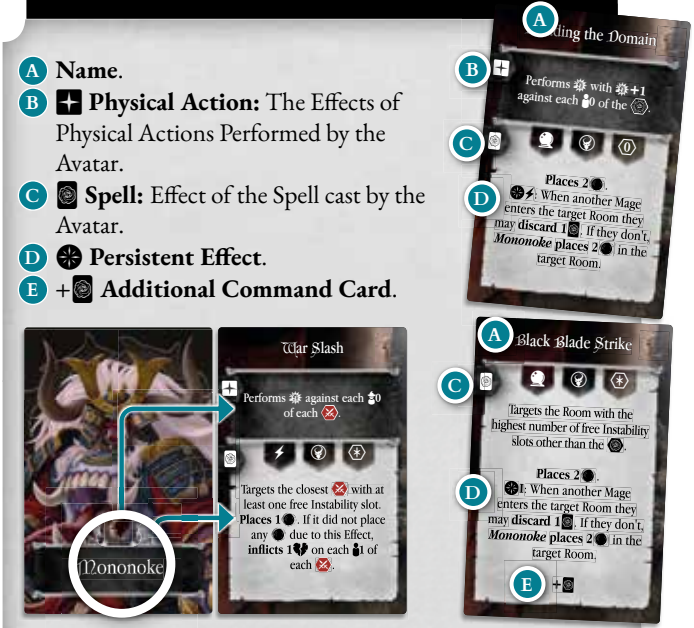
Some Command Card Effects may contain Persistent Effects. (see page 23). The Effect indicates which of the four Persistent Tokens (⚡, I, II, III) must be assigned to the target to represent the presence of the Effect in play.
When one of these Effects is resolved, do not place the Command Card showing it in the Avatar's **Memories** but keep it aside so that all players can consult it and always be clear about the Effect linked to the **Persistent Token** that the Avatar has assigned to the target of the Effect.

4. Clean-up Phase

During **Step 1** of the Clean-up Phase, all Command Cards revealed during the current Turn are shuffled and placed back under the Command Card Deck, and all Avatar Activation Tokens are turned to the Available side.

Command Card Anatomy

A **Name**.
B **Physical Action:** The Effects of Physical Actions Performed by the Avatar.
C **Spell:** Effect of the Spell cast by the Avatar.
D **Persistent Effect**.
E +1 **Additional Command Card**.



Reading a Command Card

Even if not specified, the subject of every Effect on a Command Card is always the name of the Avatar. The cases highlighted in the image should be interpreted as:

: "**Mononoke** performs a against each of each ."

: "**Mononoke** targets the closest with at least one..."

Beyond the Duel

DUEL IN BLACK ROSE WARS

The contents of this box can be used to expand *Black Rose Wars* and *Black Rose Wars: Rebirth* by including them in games as indicated below.

Shugendō School of Magic: During **step** 9 of the **Setup** you may replace one of the Schools of Magic in the core game with the Shugendō School.

Forgotten Spells: you may add these cards to the Forgotten Spells deck in the core game.

Mages: These two Mages can be chosen as Mages during **step** 8 of the **Setup** described in the core game rulebook.

Rooms: The Rooms in this box (and their corresponding Activation Tokens) can replace the Rooms in Black Rose Wars that have the same name, ignoring the part of the name in italics, to have a Lodge with more varied effects. For example, you can replace the Black Rose Room from the core game with the ***Spiritual* Black Rose Room**, or the **Sacrificial Altar** from the core game with the ***Oni* Sacrificial Altar.**
To use the Rooms from this expansion in *Black Rose Wars: Rebirth*, please refer to the compatibility rules accessible via the QR Code.

Avatar: The Avatar in this box is compatible and usable in a game of *Black Rose Wars* using the rules included in the *Black Rose Wars: Rebirth* rulebook and subsequent products.

Portals: Portals can be used in *Black Rose Wars* and *Black Rose Wars: Rebirth* games by placing them at Room exits on the edge of the Lodge as shown in the example, or by experimenting with alternative placements to create new Lodge layouts.

BLACK ROSE WARS IN DUEL

The components of other products in the *Black Rose Wars* line can be used to expand this game by including them in games as indicated below.

School of Magic: You may replace the School of Magic in this box with any School of Magic from other products, taking care to include all the materials necessary for that School to function (such as Evocations). Due to the head-to-head nature of this game, some of the Schools of Magic that develop complex tactics may not be effective in a duel. Please also note that if a School of Magic involves the use of additional rules, these must be consulted in the *Black Rose Wars/ Rebirth* core game rulebook or in the rulebook of the expansion from which the chosen School of Magic originates.

Forgotten Spells: you may add all Forgotten Spells from other *Black Rose Wars* products to the games of this game, adding them to the deck or replacing cards in the deck during Setup.

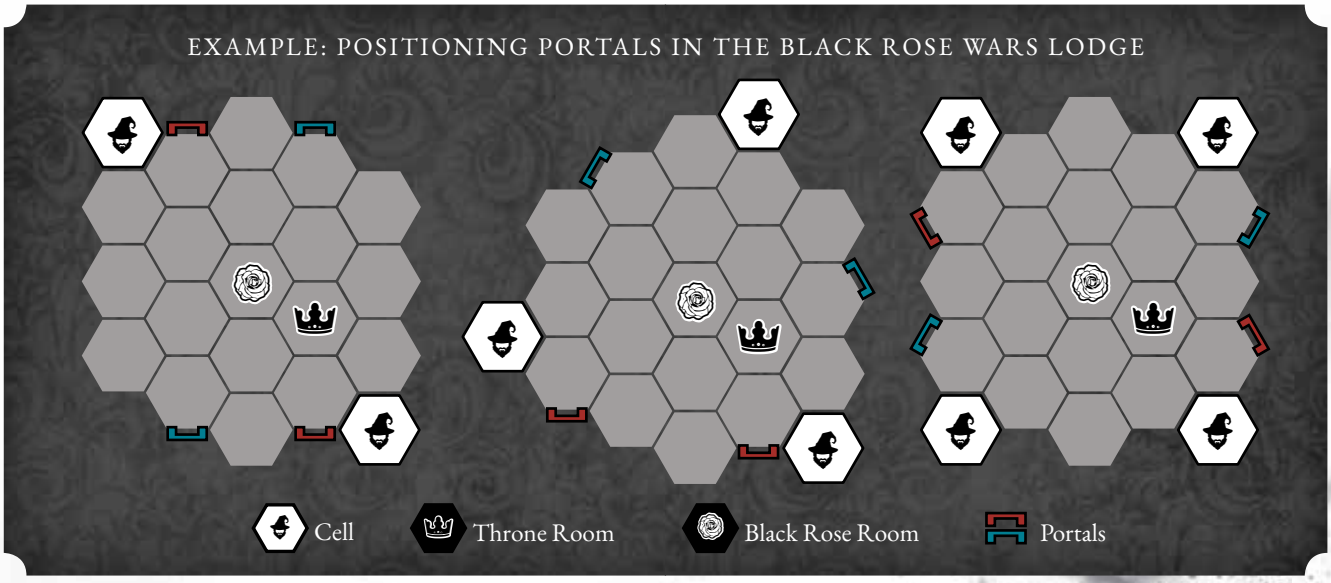
Mages: In games played with this box you can use all Mages from other *Black Rose Wars* products.

Rooms: In games played with this box the seven Rooms can be replaced with Rooms from other *Black Rose Wars* products.

Avatar: The Avatars designed for *Black Rose Wars: Rebirth* are not compatible with *Black Rose Wars: Duel*, so they cannot be included in the game.

Non-compatible materials: *Black Rose Wars* Quest Cards and Event Cards are not used in Duel games. Materials that generate effects (usually Spells and Rooms) that call these types of cards into play must never be included in the game.

EXAMPLE: POSITIONING PORTALS IN THE BLACK ROSE WARS LODGE



MAGE'S DEFEAT

: You are defeated. Place yourself in your Cell. The Mage (or the) who inflicted the last on you (even if it was inflicted by one of their Evocations) advances their cube on the **Trophy Track** () by one space.
The opponent who inflicted the most on you **gains 4**, the other **gains 1**. If both opponents inflicted the same number of , on you, each of them **gains 3**. If all that you suffered were inflicted by the same opponent, they **gain 5**.
Return all on your Health Track to their respective owners.

EVOCATION'S ACTIVATION

Target: *The target of the **Evocation's Activation** is specified in the Effect that causes it to be resolved.*
Resolve each of the following points once in the order you prefer:

- Move the Evocation 1. You can perform this a number of times equal to its **Speed Value.** Each individual "Move 1" is considered to be separated by a period (.); unused "Move 1" Effects are lost.
- The Evocation performs a **Physical Attack** against a 0.

EVOCATION'S DEFEAT

*: The Evocation is defeated. Take the Evocation Model out of the Lodge. Return all on its Evocation Card to their respective owners, and discard that card, returning it to the Evocation Card deck.

EVOCATION REMOVAL

*: Remove the Evocation from the Lodge. Return all on its Evocation Card to their respective owners, and discard that card, returning it to the Evocation Card deck.

UNSTABLE SPELL

0: **Place 1**.

AVATAR'S DEFEAT

: The Avatar is defeated. Place it in its cell. The Mage who inflicted the last (even if it was inflicted by one of their Evocations) advances their cube on the **Trophy Track** () by one space.
The opponent who inflicted the most **gains 4**, the other **gains 1**. If both opponents inflicted the same number of , each **gains 3**. If all were inflicted by the same opponent, they **gain 5**.
Return all on the Avatar's Health Track to their respective owners' reserves.
If the Avatar has at least one **Exhausted Avatar Activation Token**, flip one of them to the **Available** side.
